Hi, my name is Kirra and I'd like to tell you all about my scans.

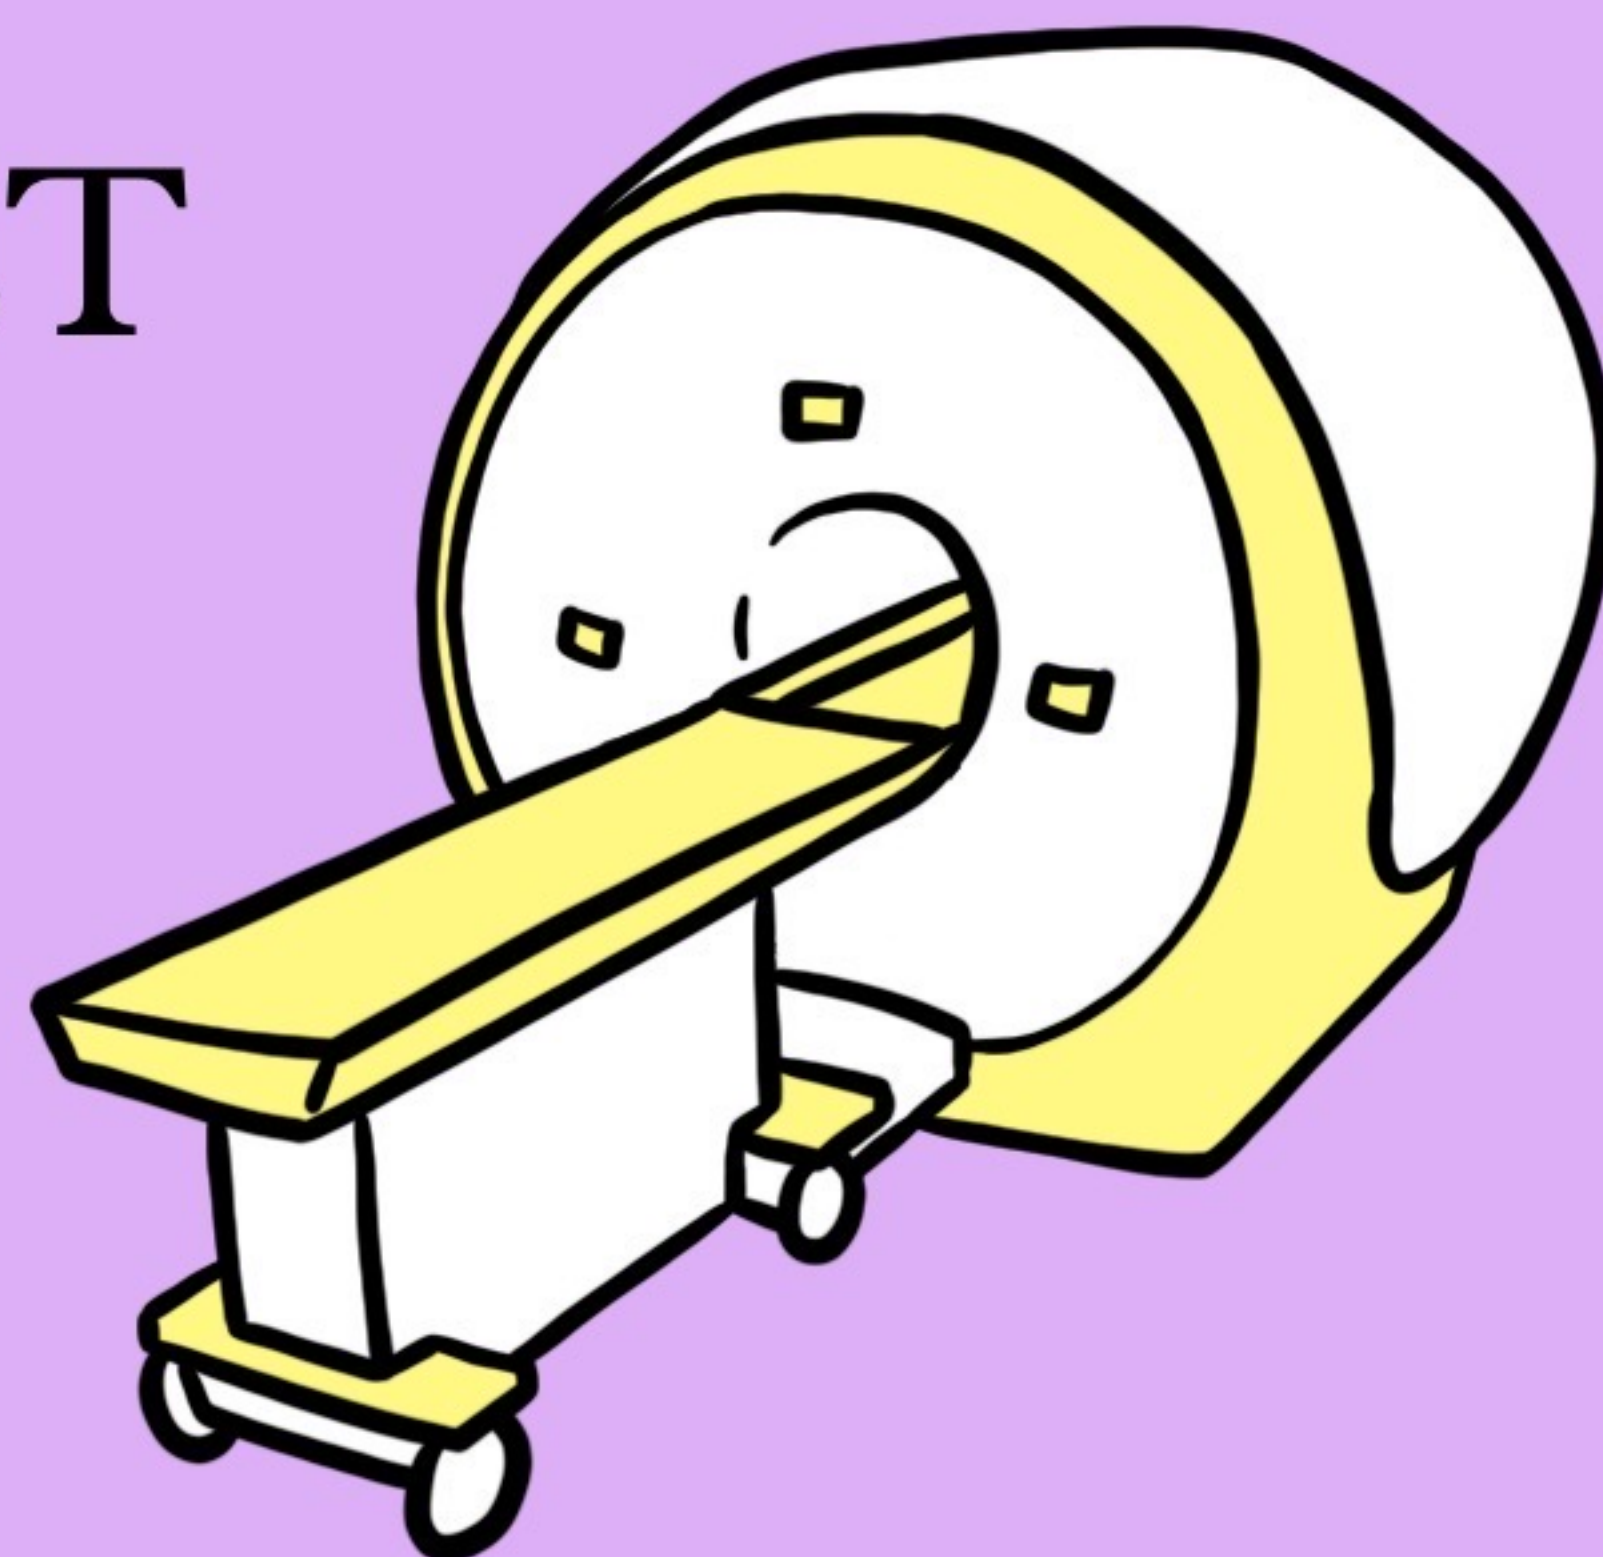

When I was very sick I had
lots of different scans.

Ultrasound

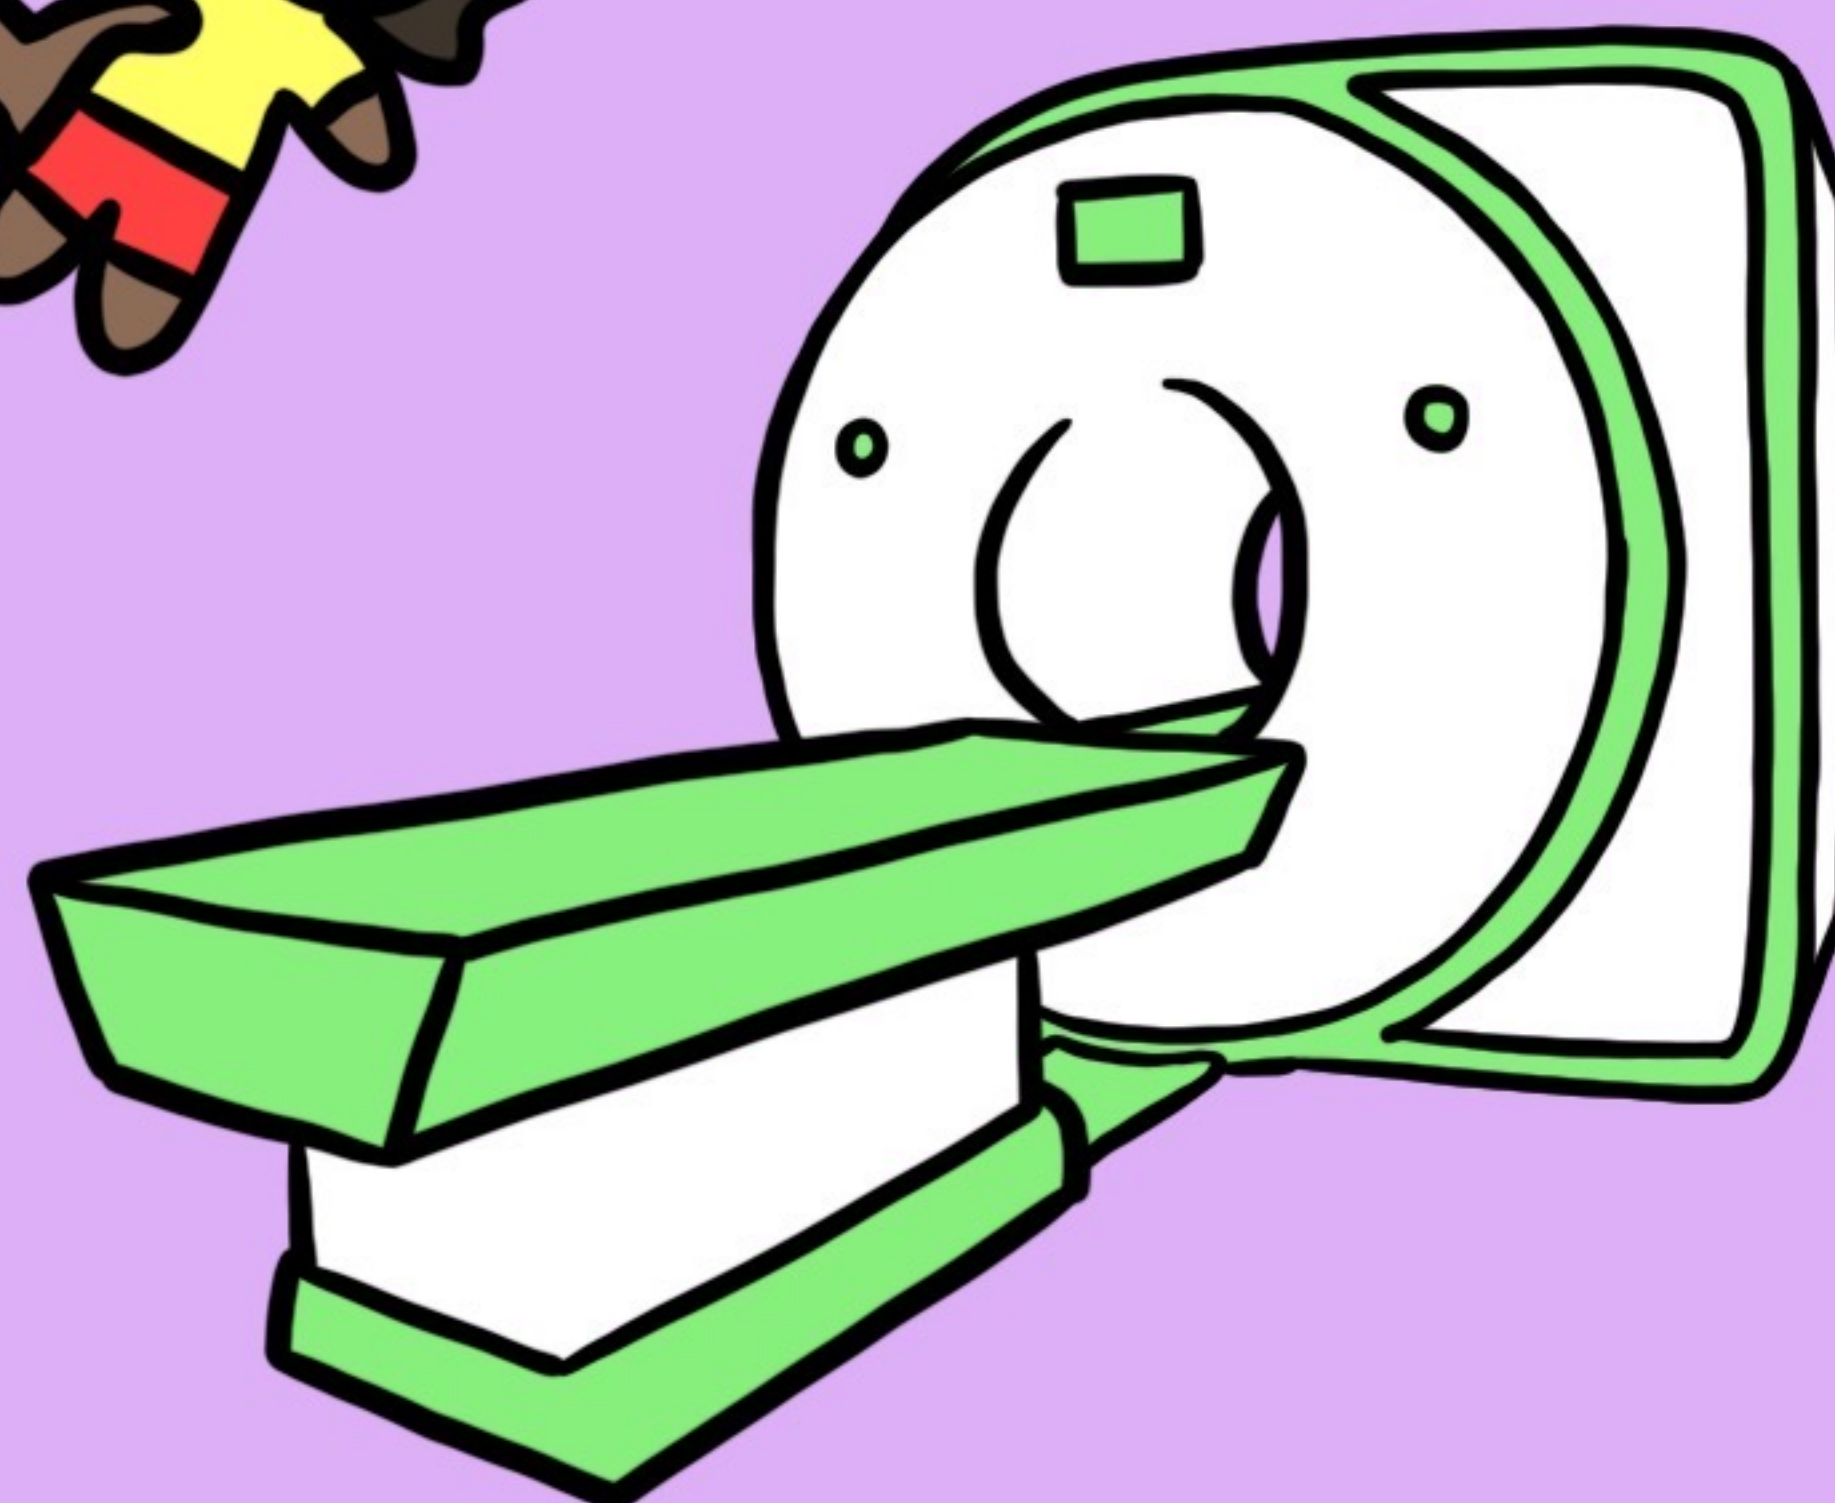

PET

CT

MRI

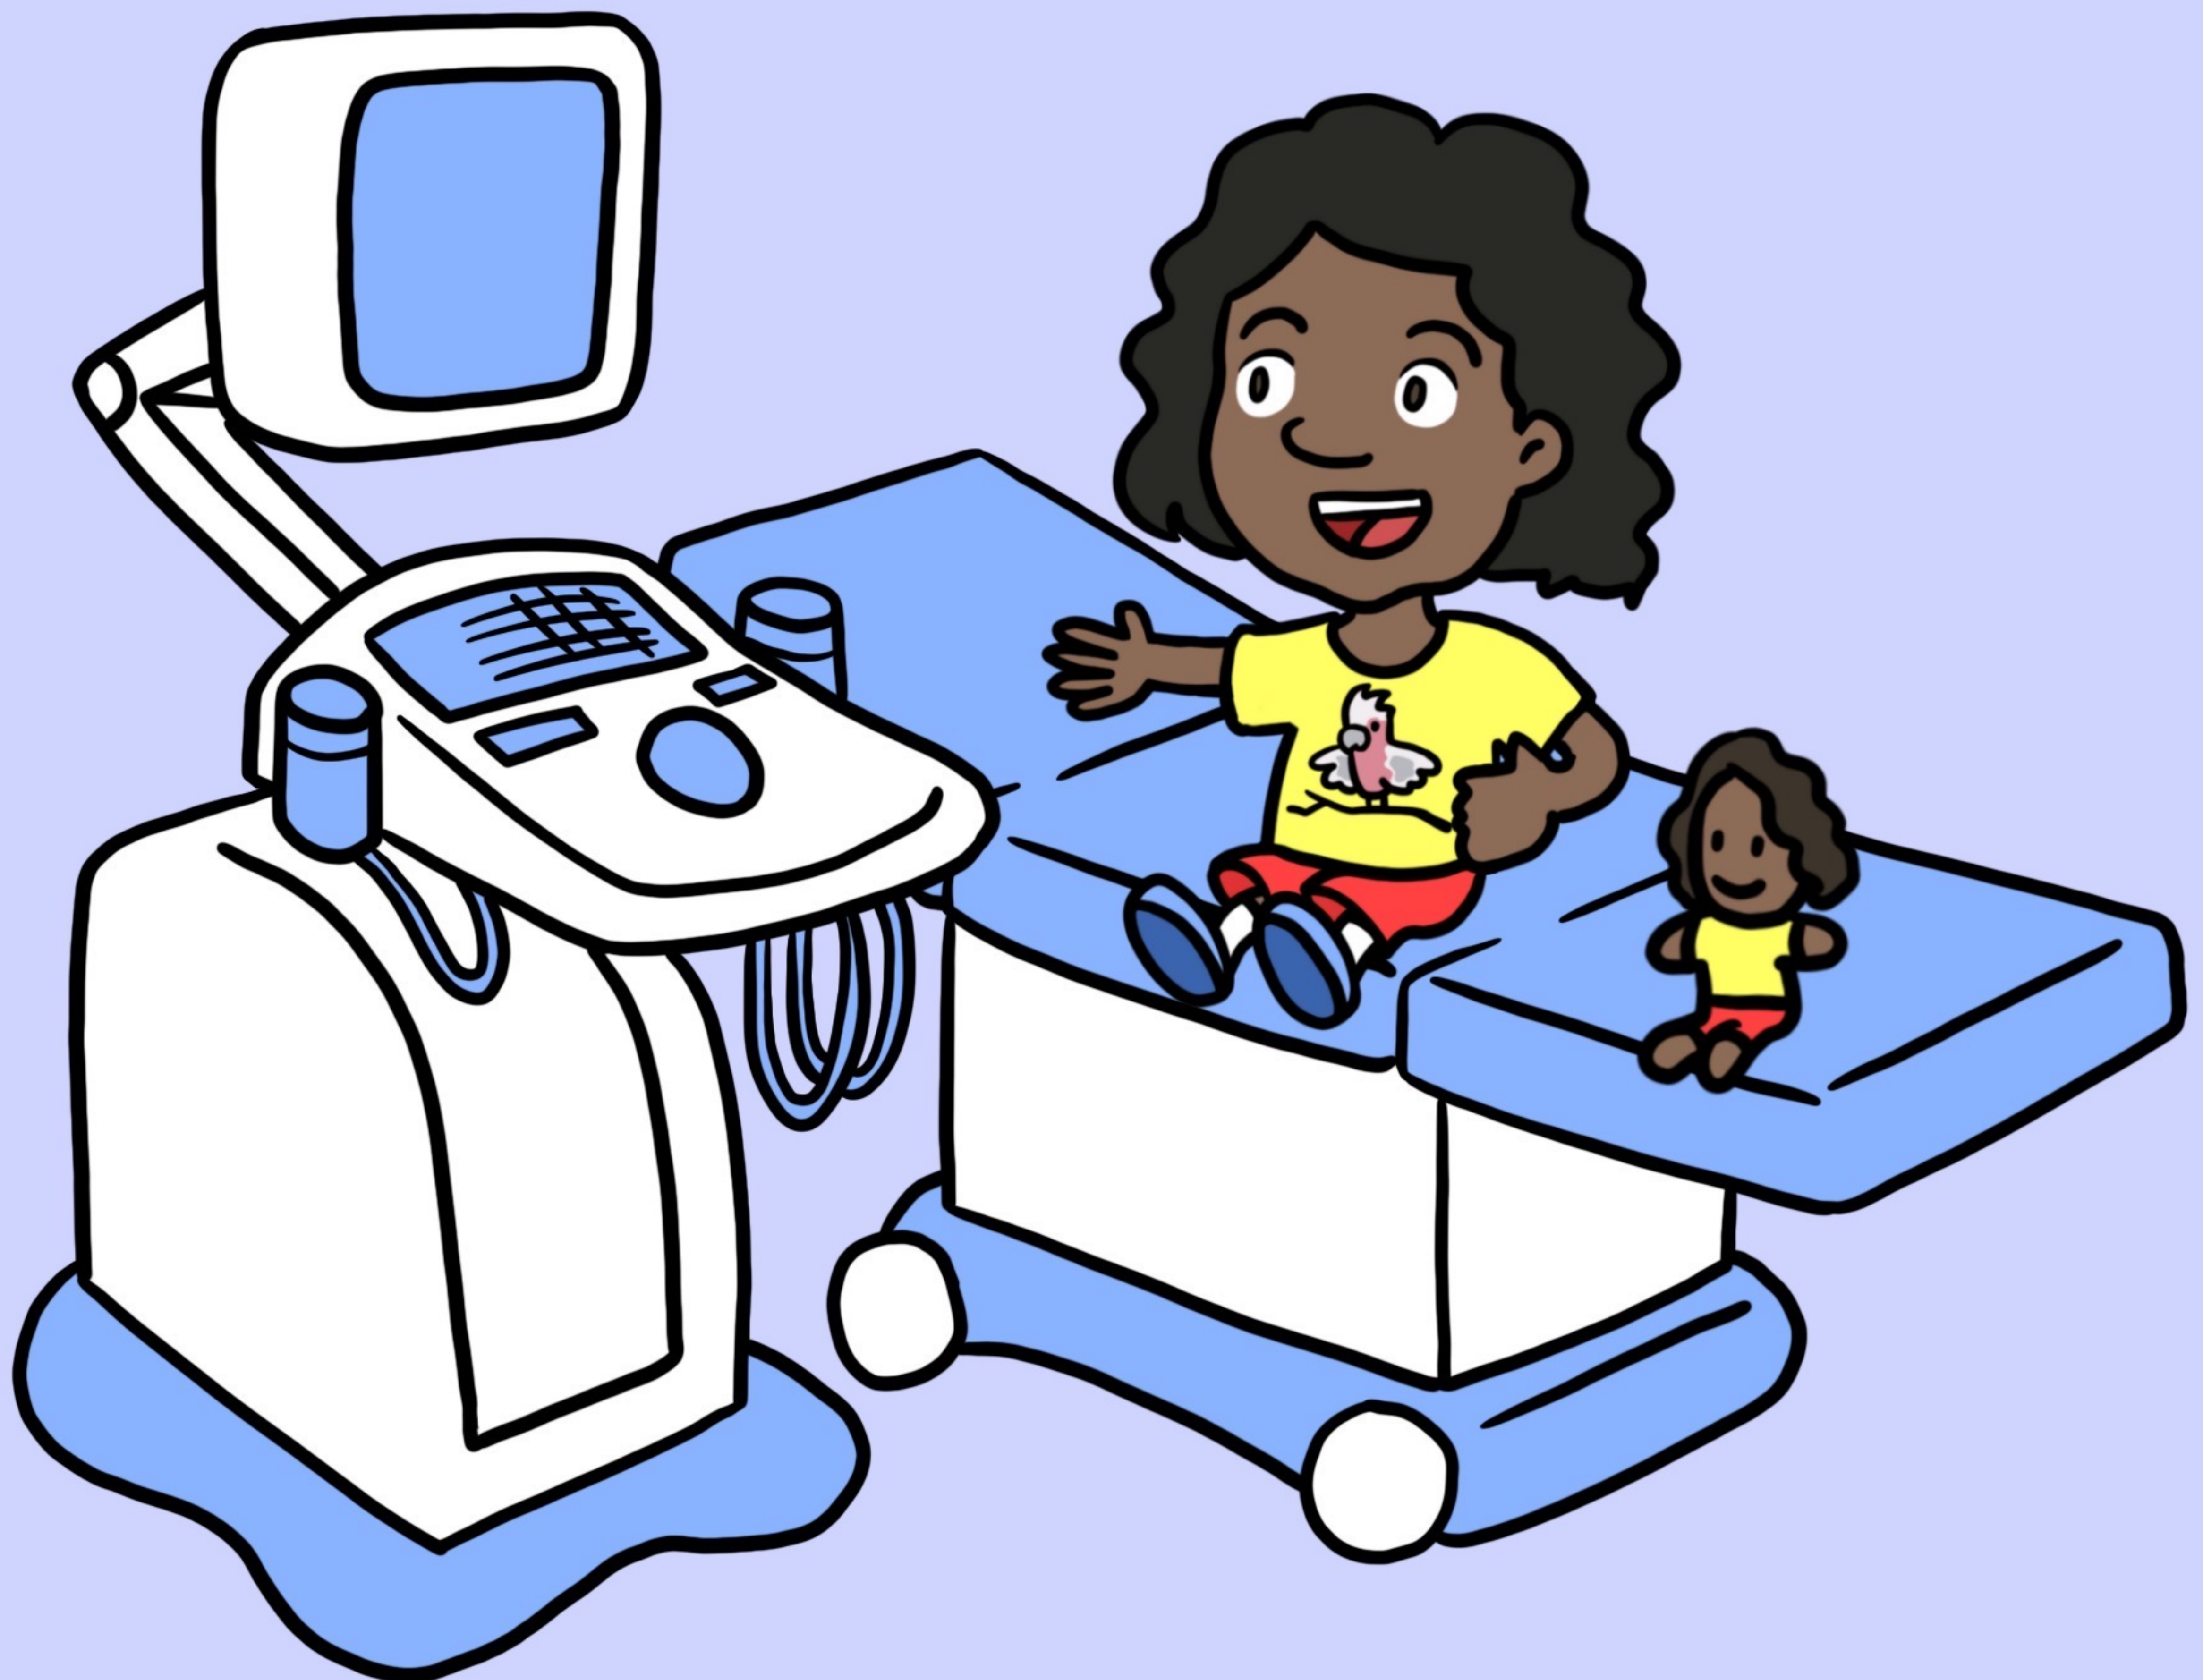

Scans are a special safe way to look inside my body to make sure I'm ok.

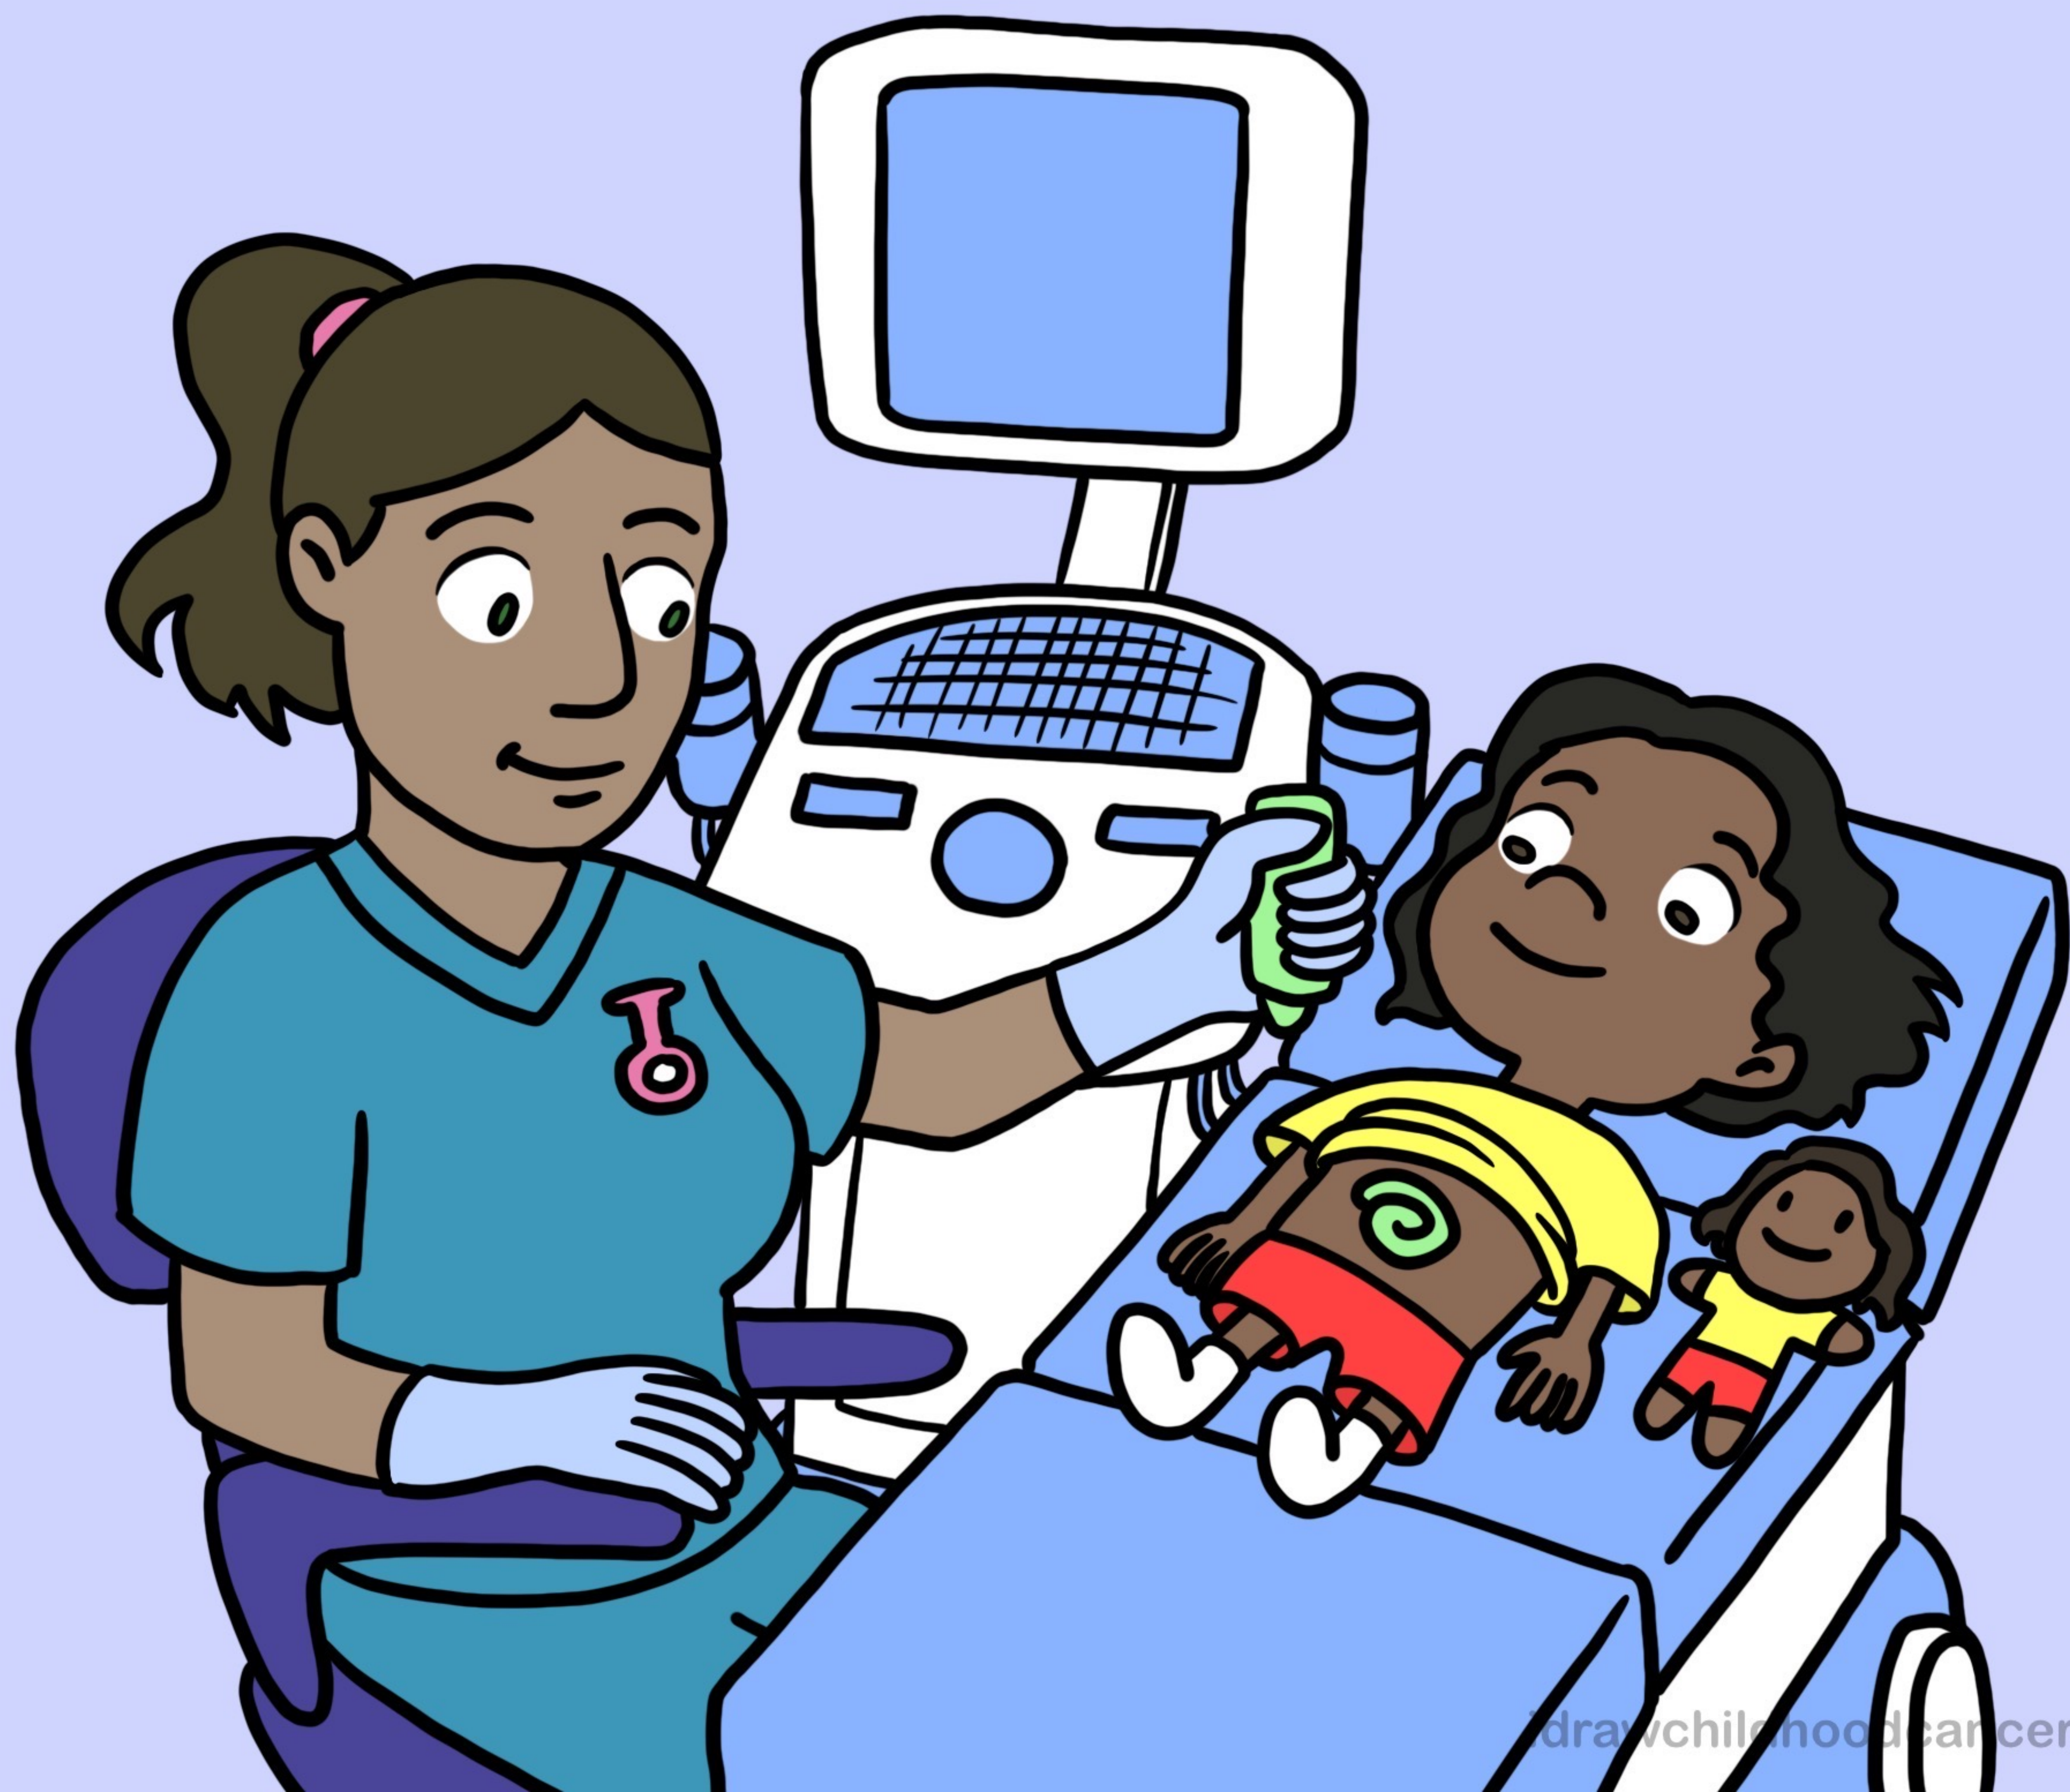

Before I have my scans I can't eat anything. My mum says I might have pizza after my scans.

This scan is called an
ultrasound. I think it looks
like a robot.

The scan person puts a gel on my tummy so the ultrasound machine can see inside.

The machine makes a sound
that bounces around inside me to
make a picture.

My ultrasound is very safe,
someone is always caring for me.

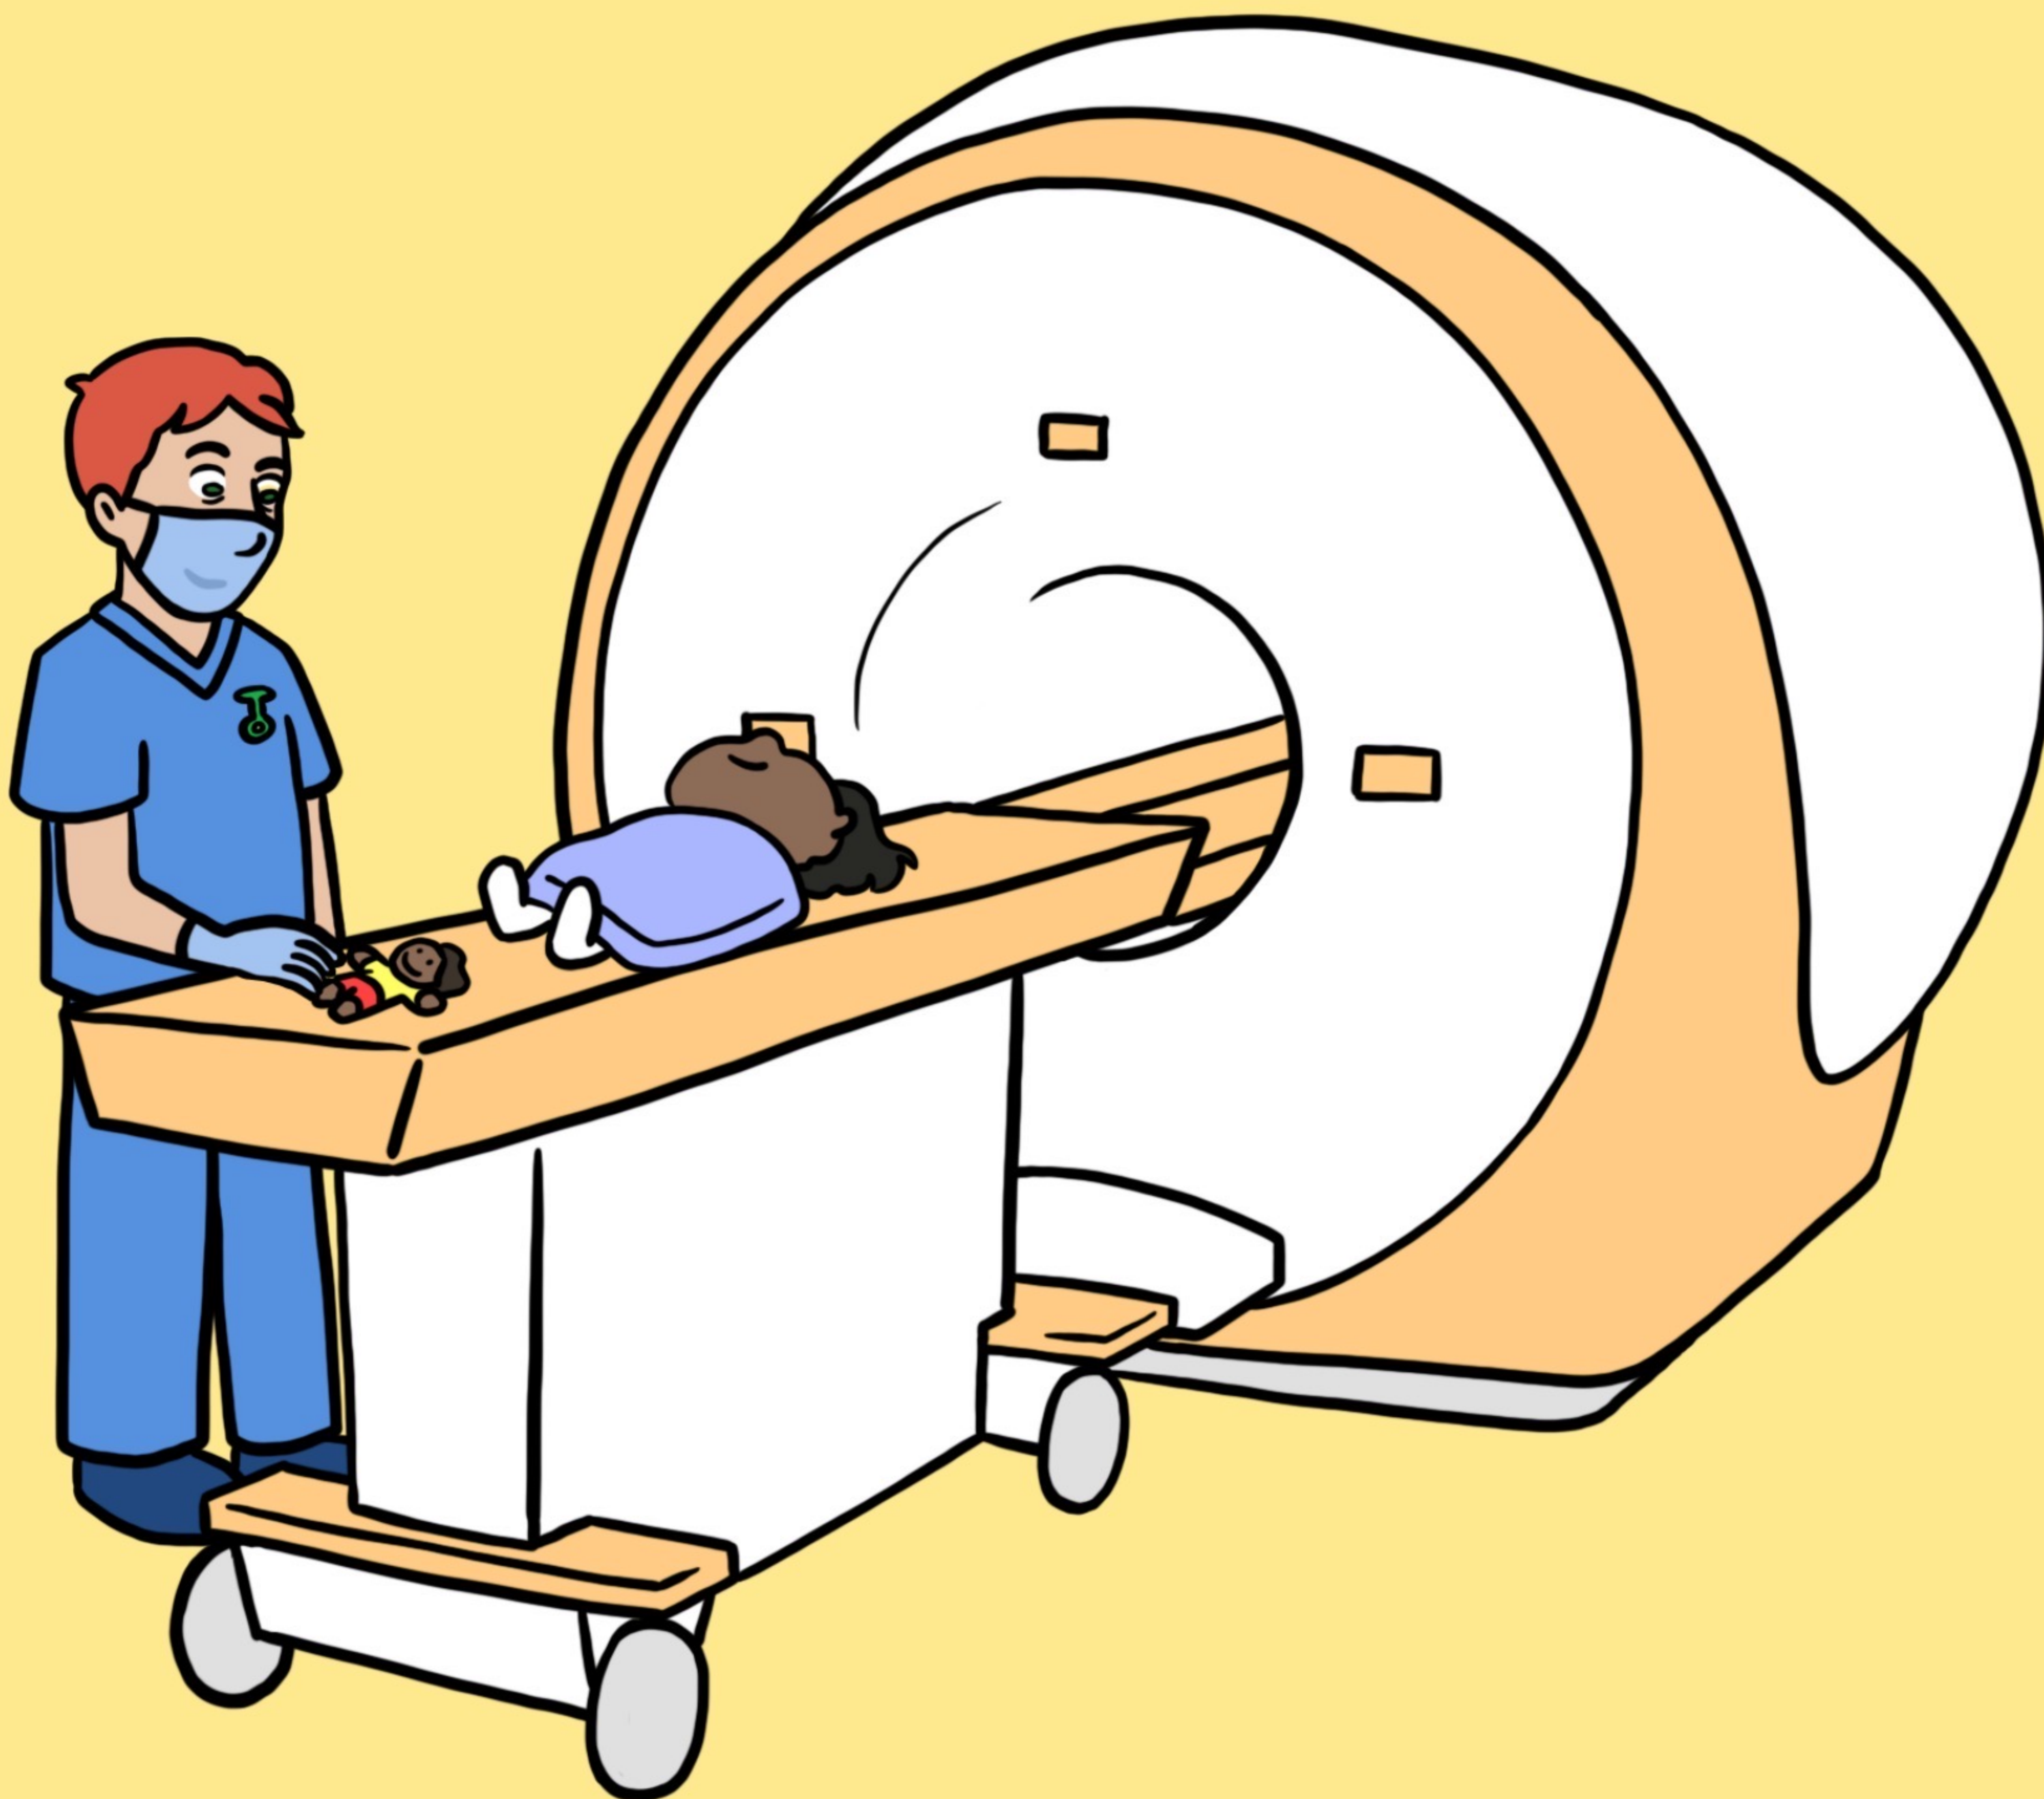

This scan is called a PET scan.
I think it looks like a big donut.

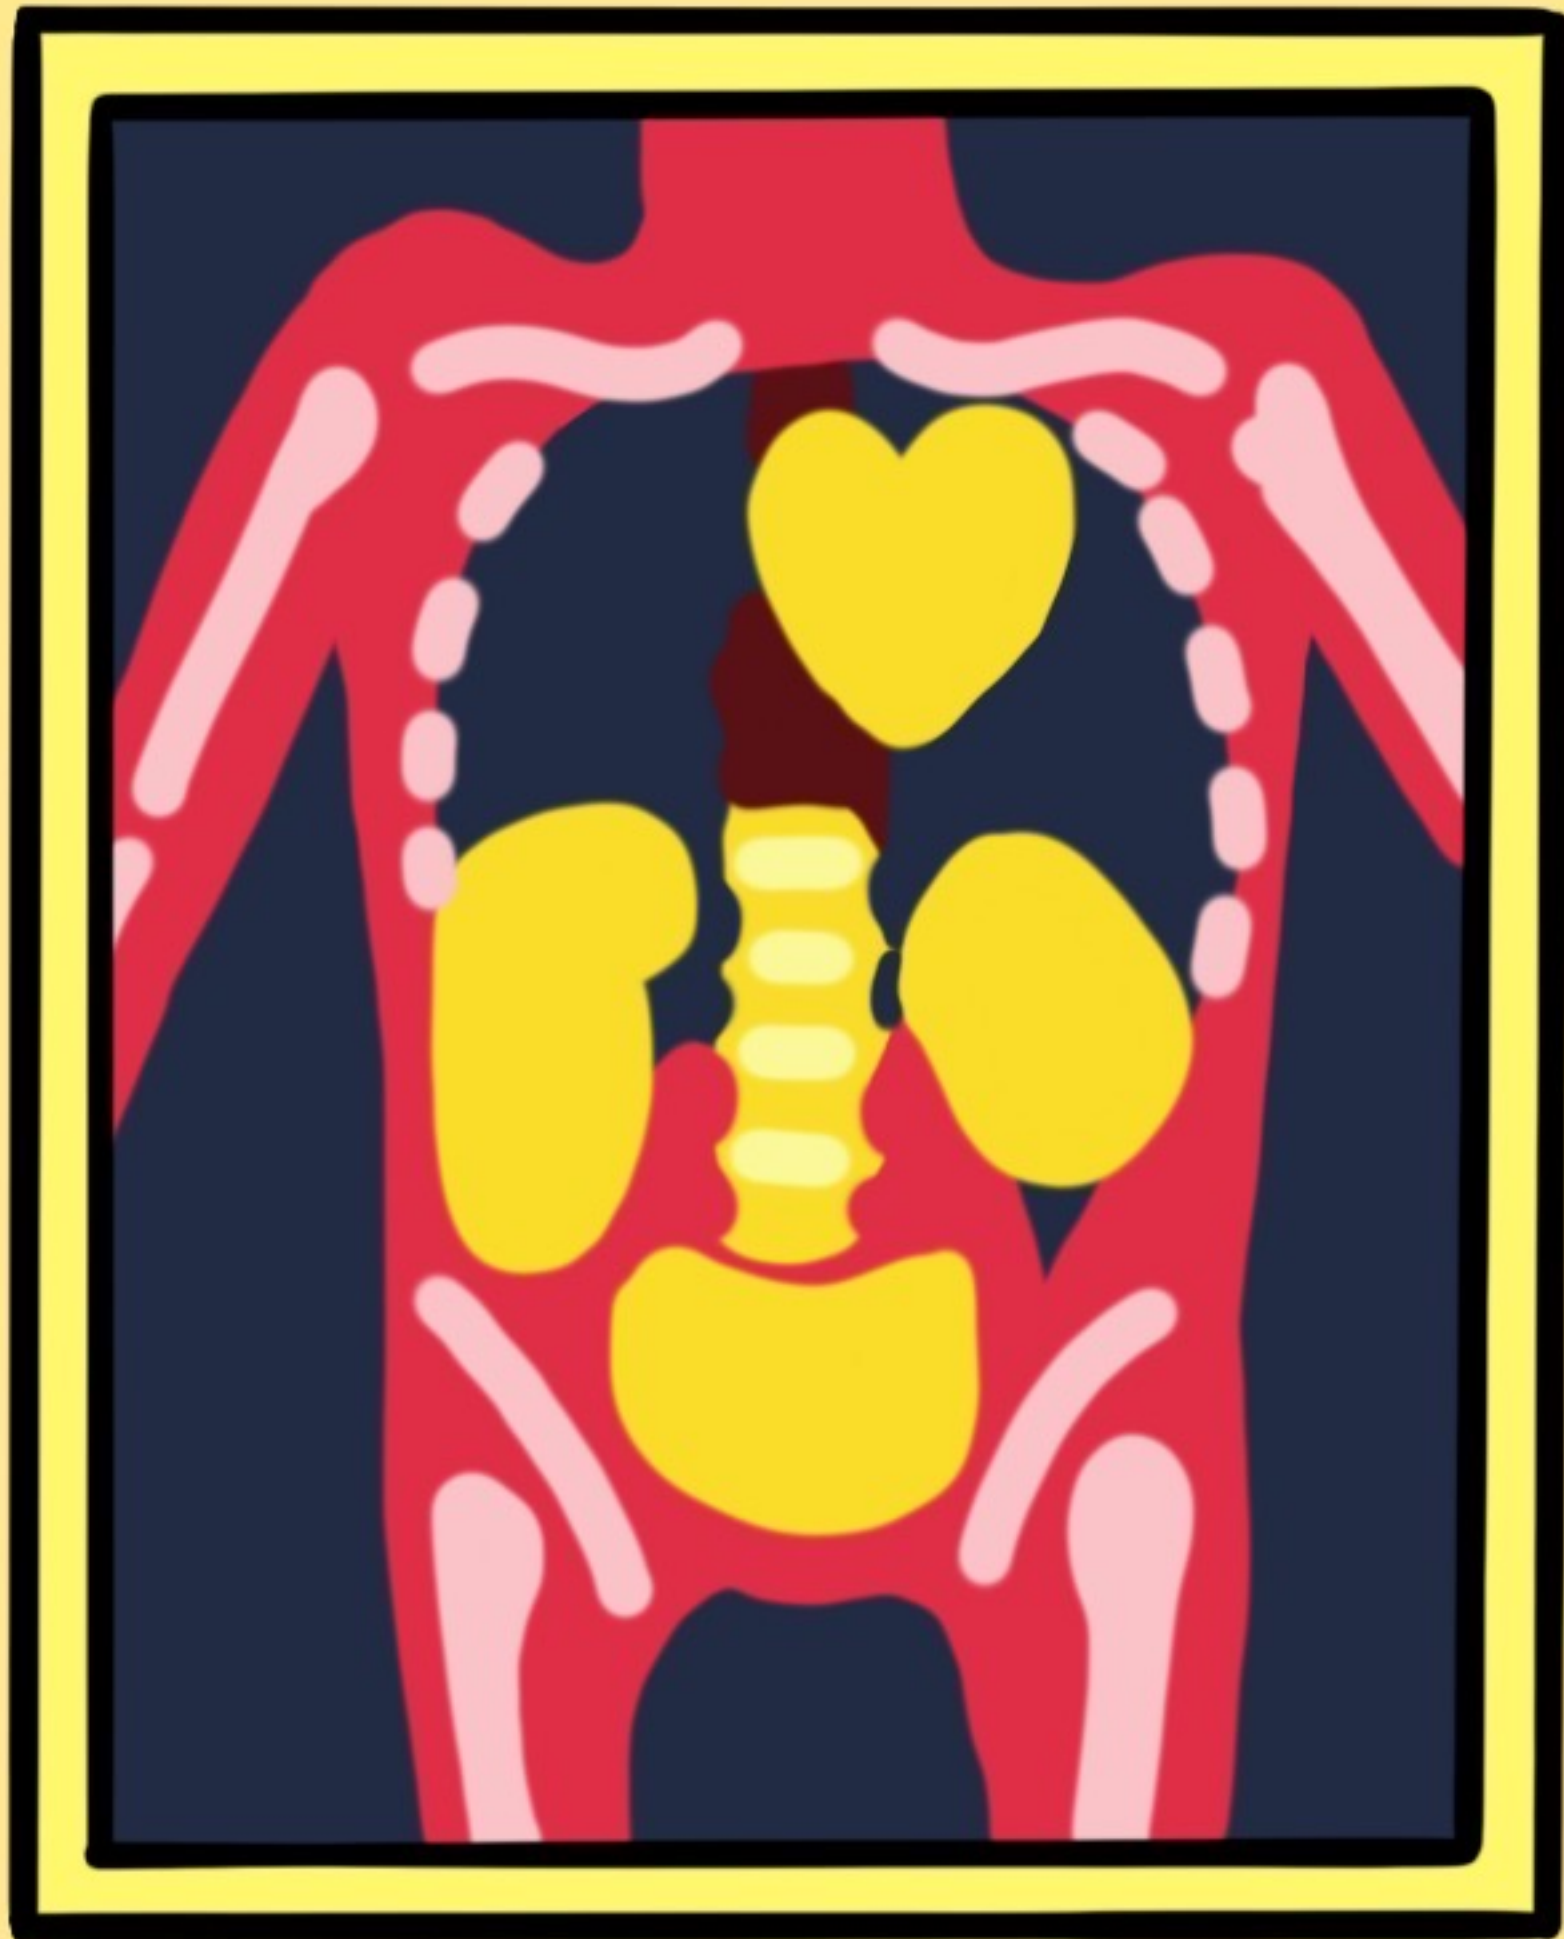

For my PET scan the scan person puts a special sugar into my tube and I have to wait.

My tube is used again to make me feel sleepy, it helps me lie very still.

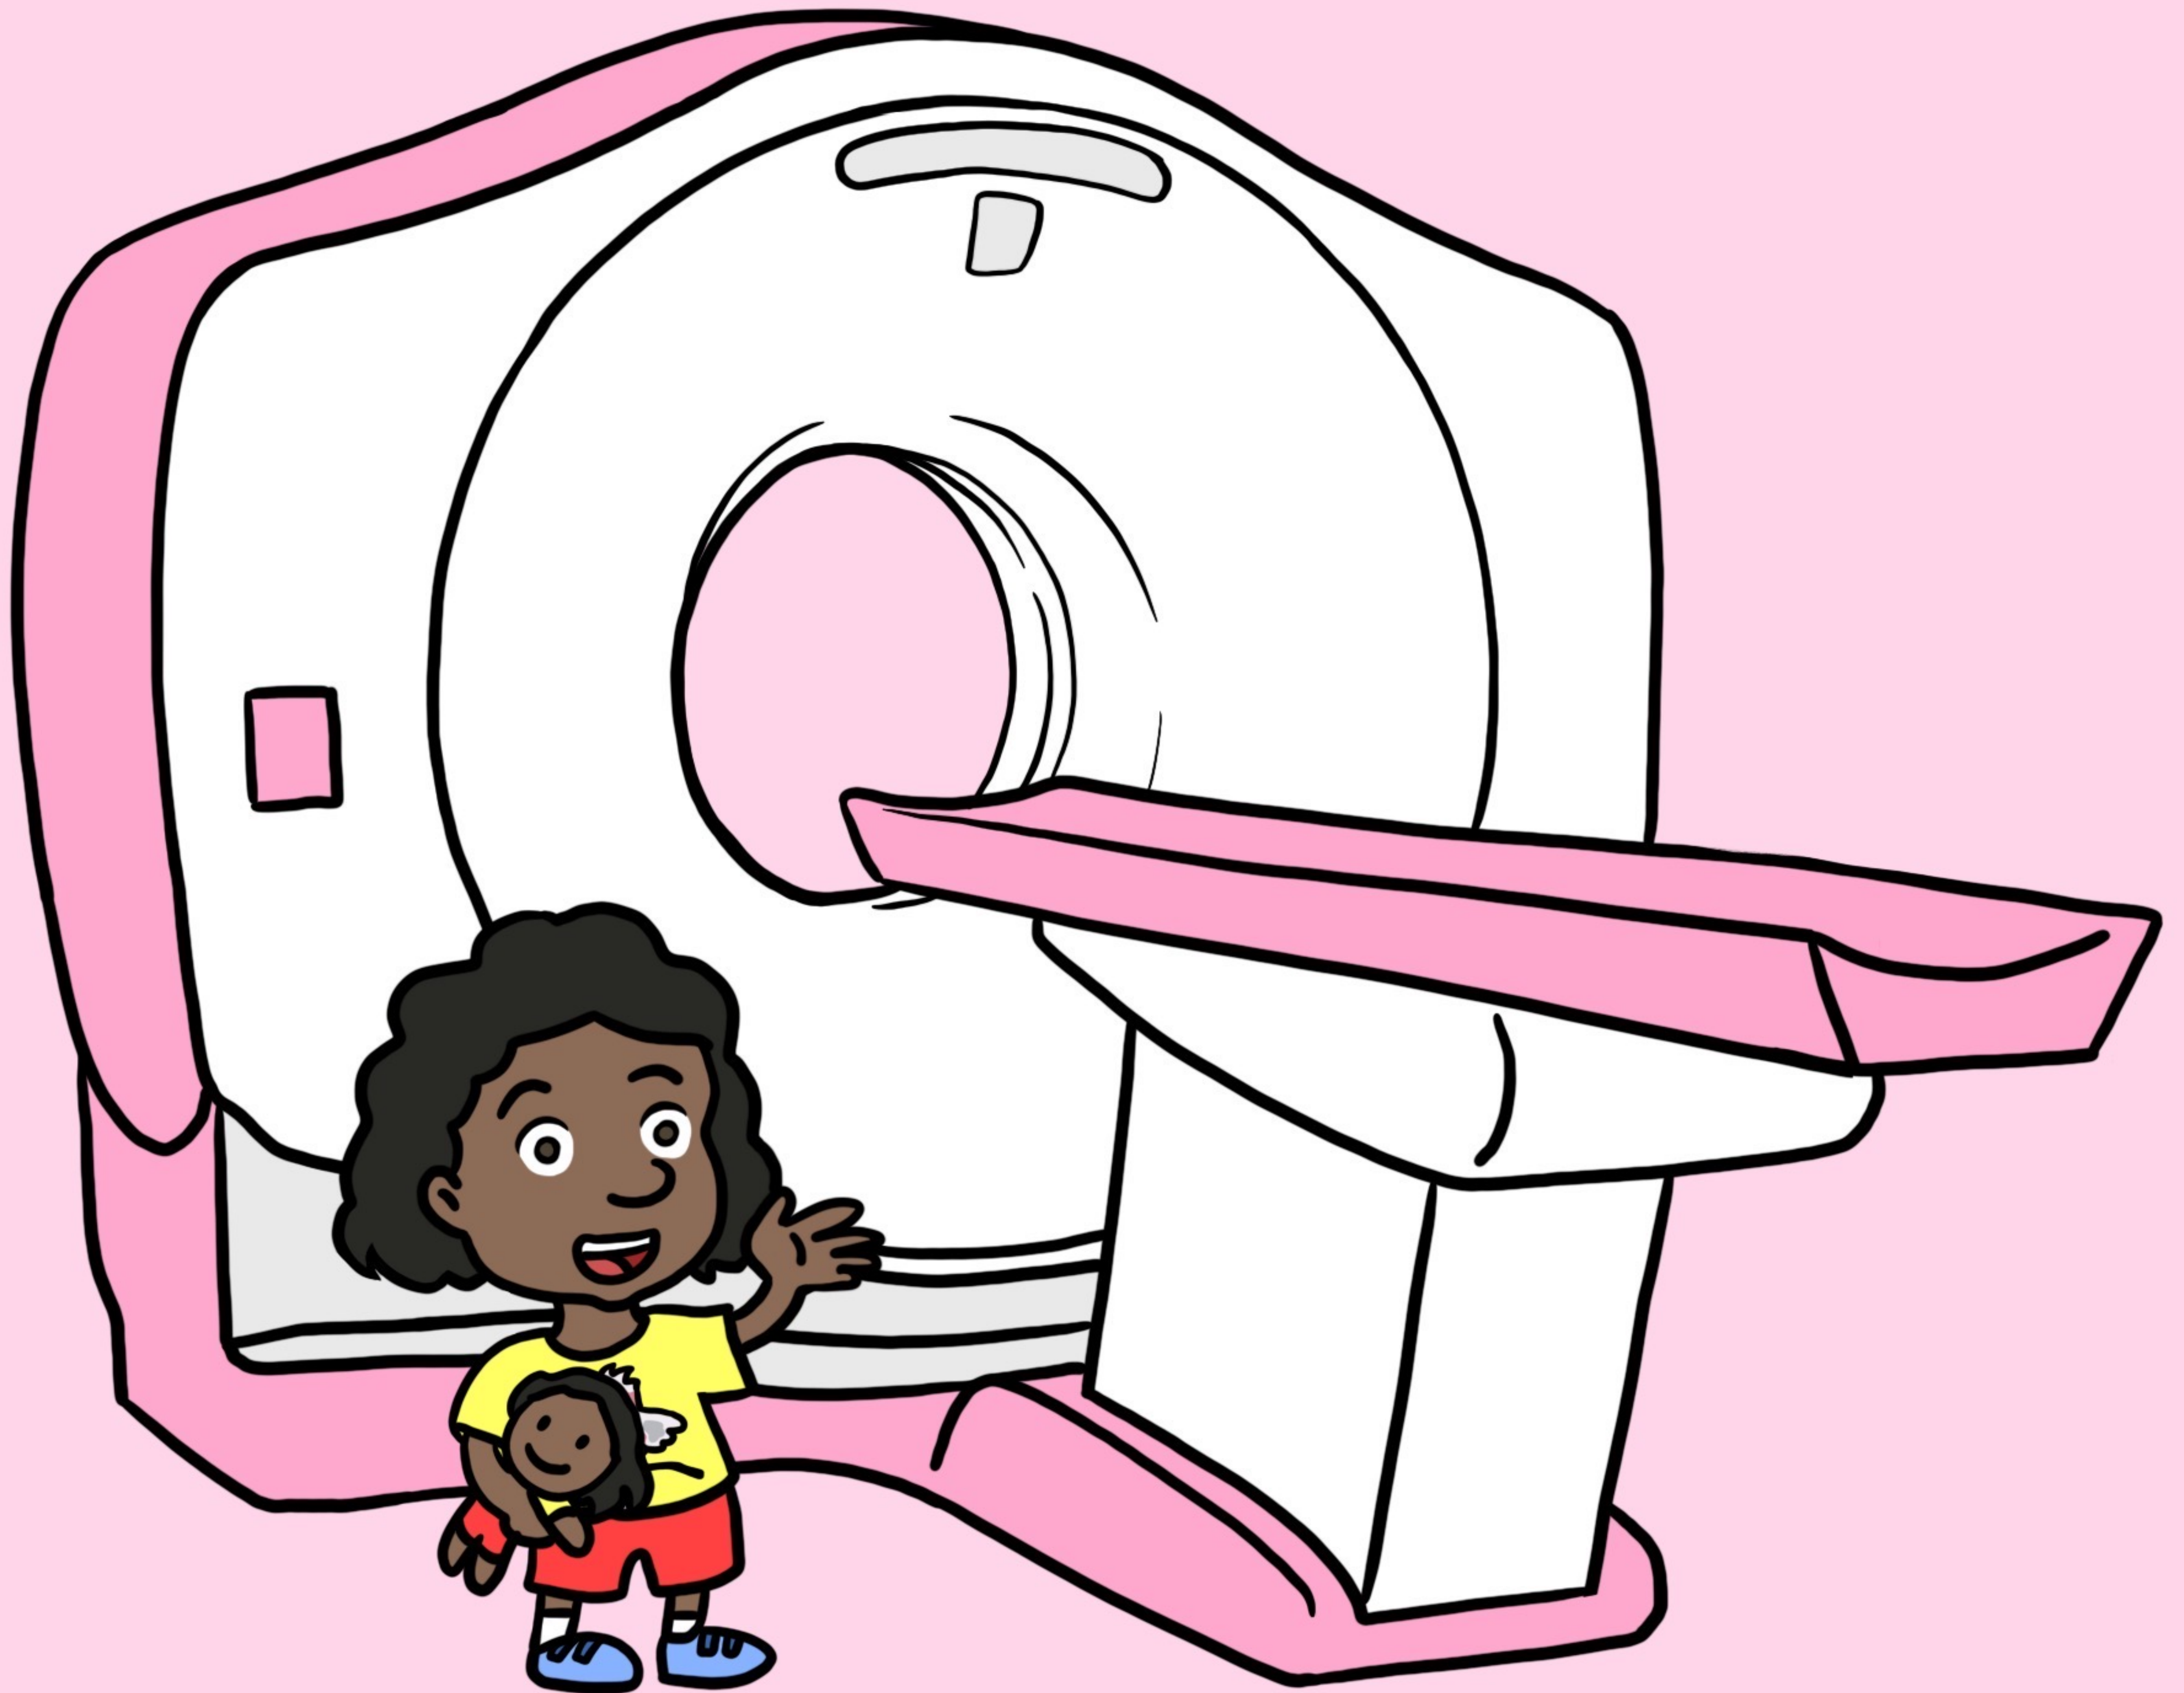

The PET scan can see the special sugar inside me to make a picture.

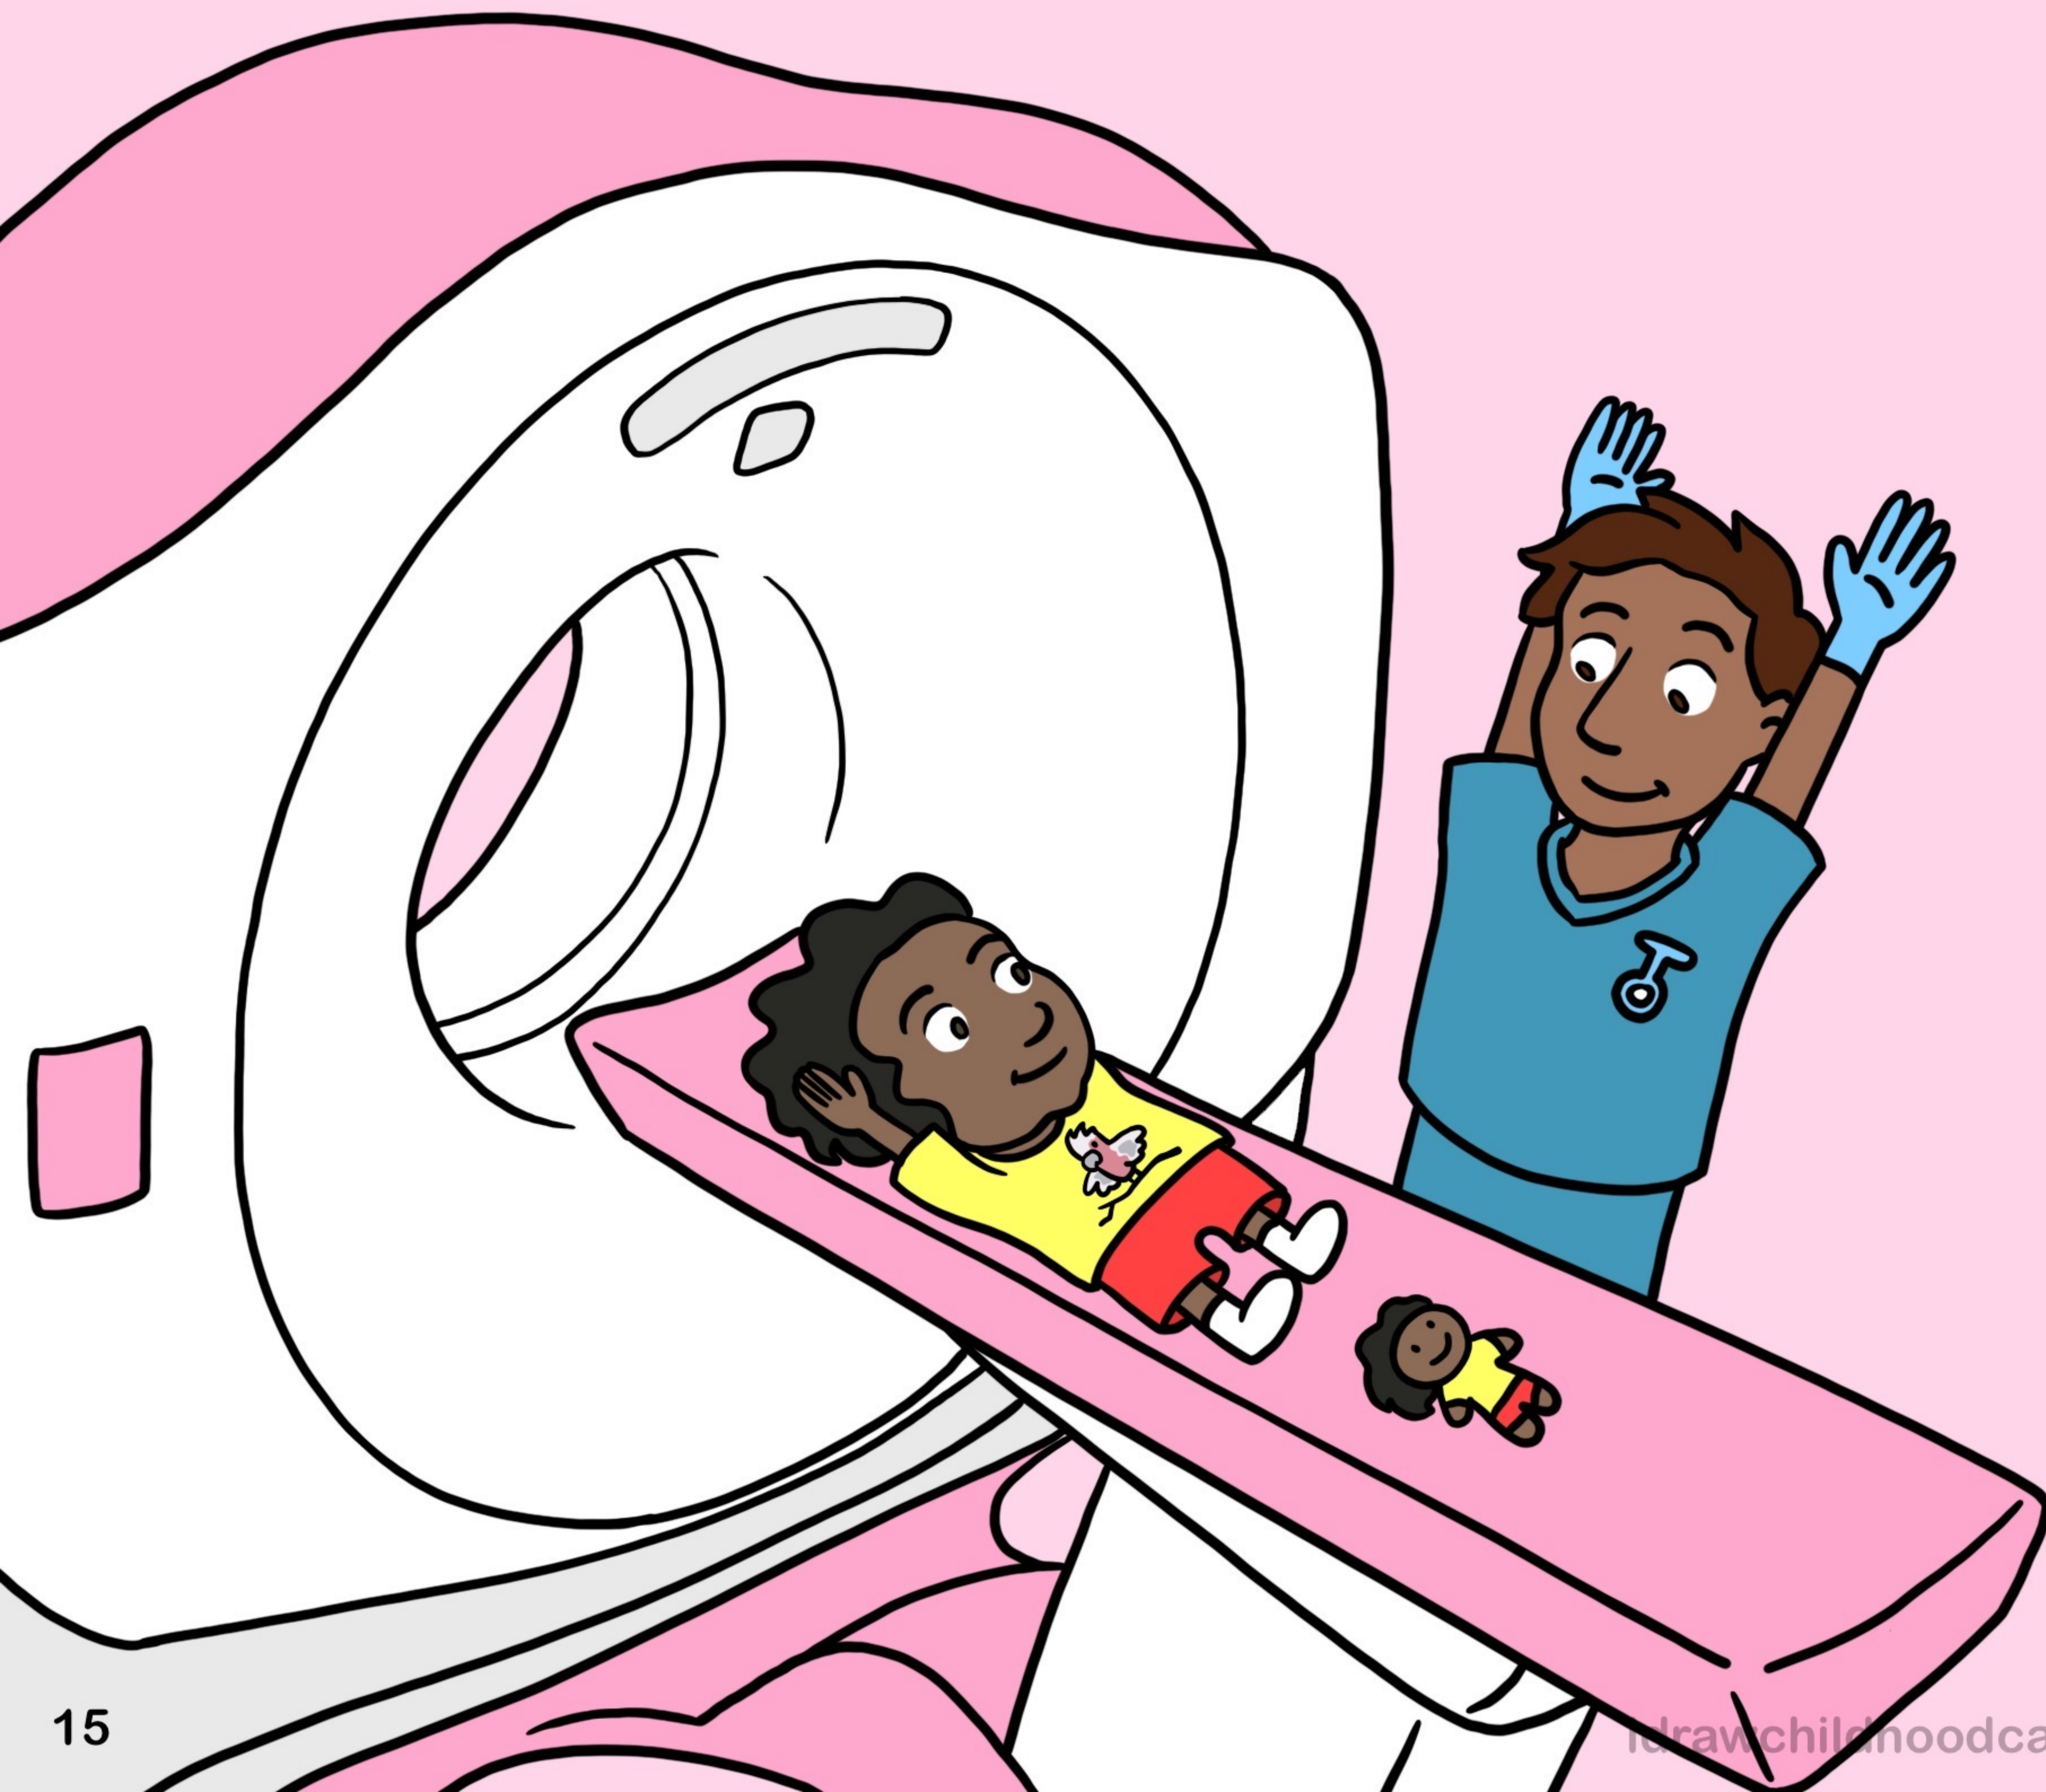

My PET scan is very safe, someone is always caring for me.

This scan is called a CT scan.
It also has a hole like a donut.

The scan person asks me if I can be very still like a rock. The CT scan makes a “Wrrrrr” sound.

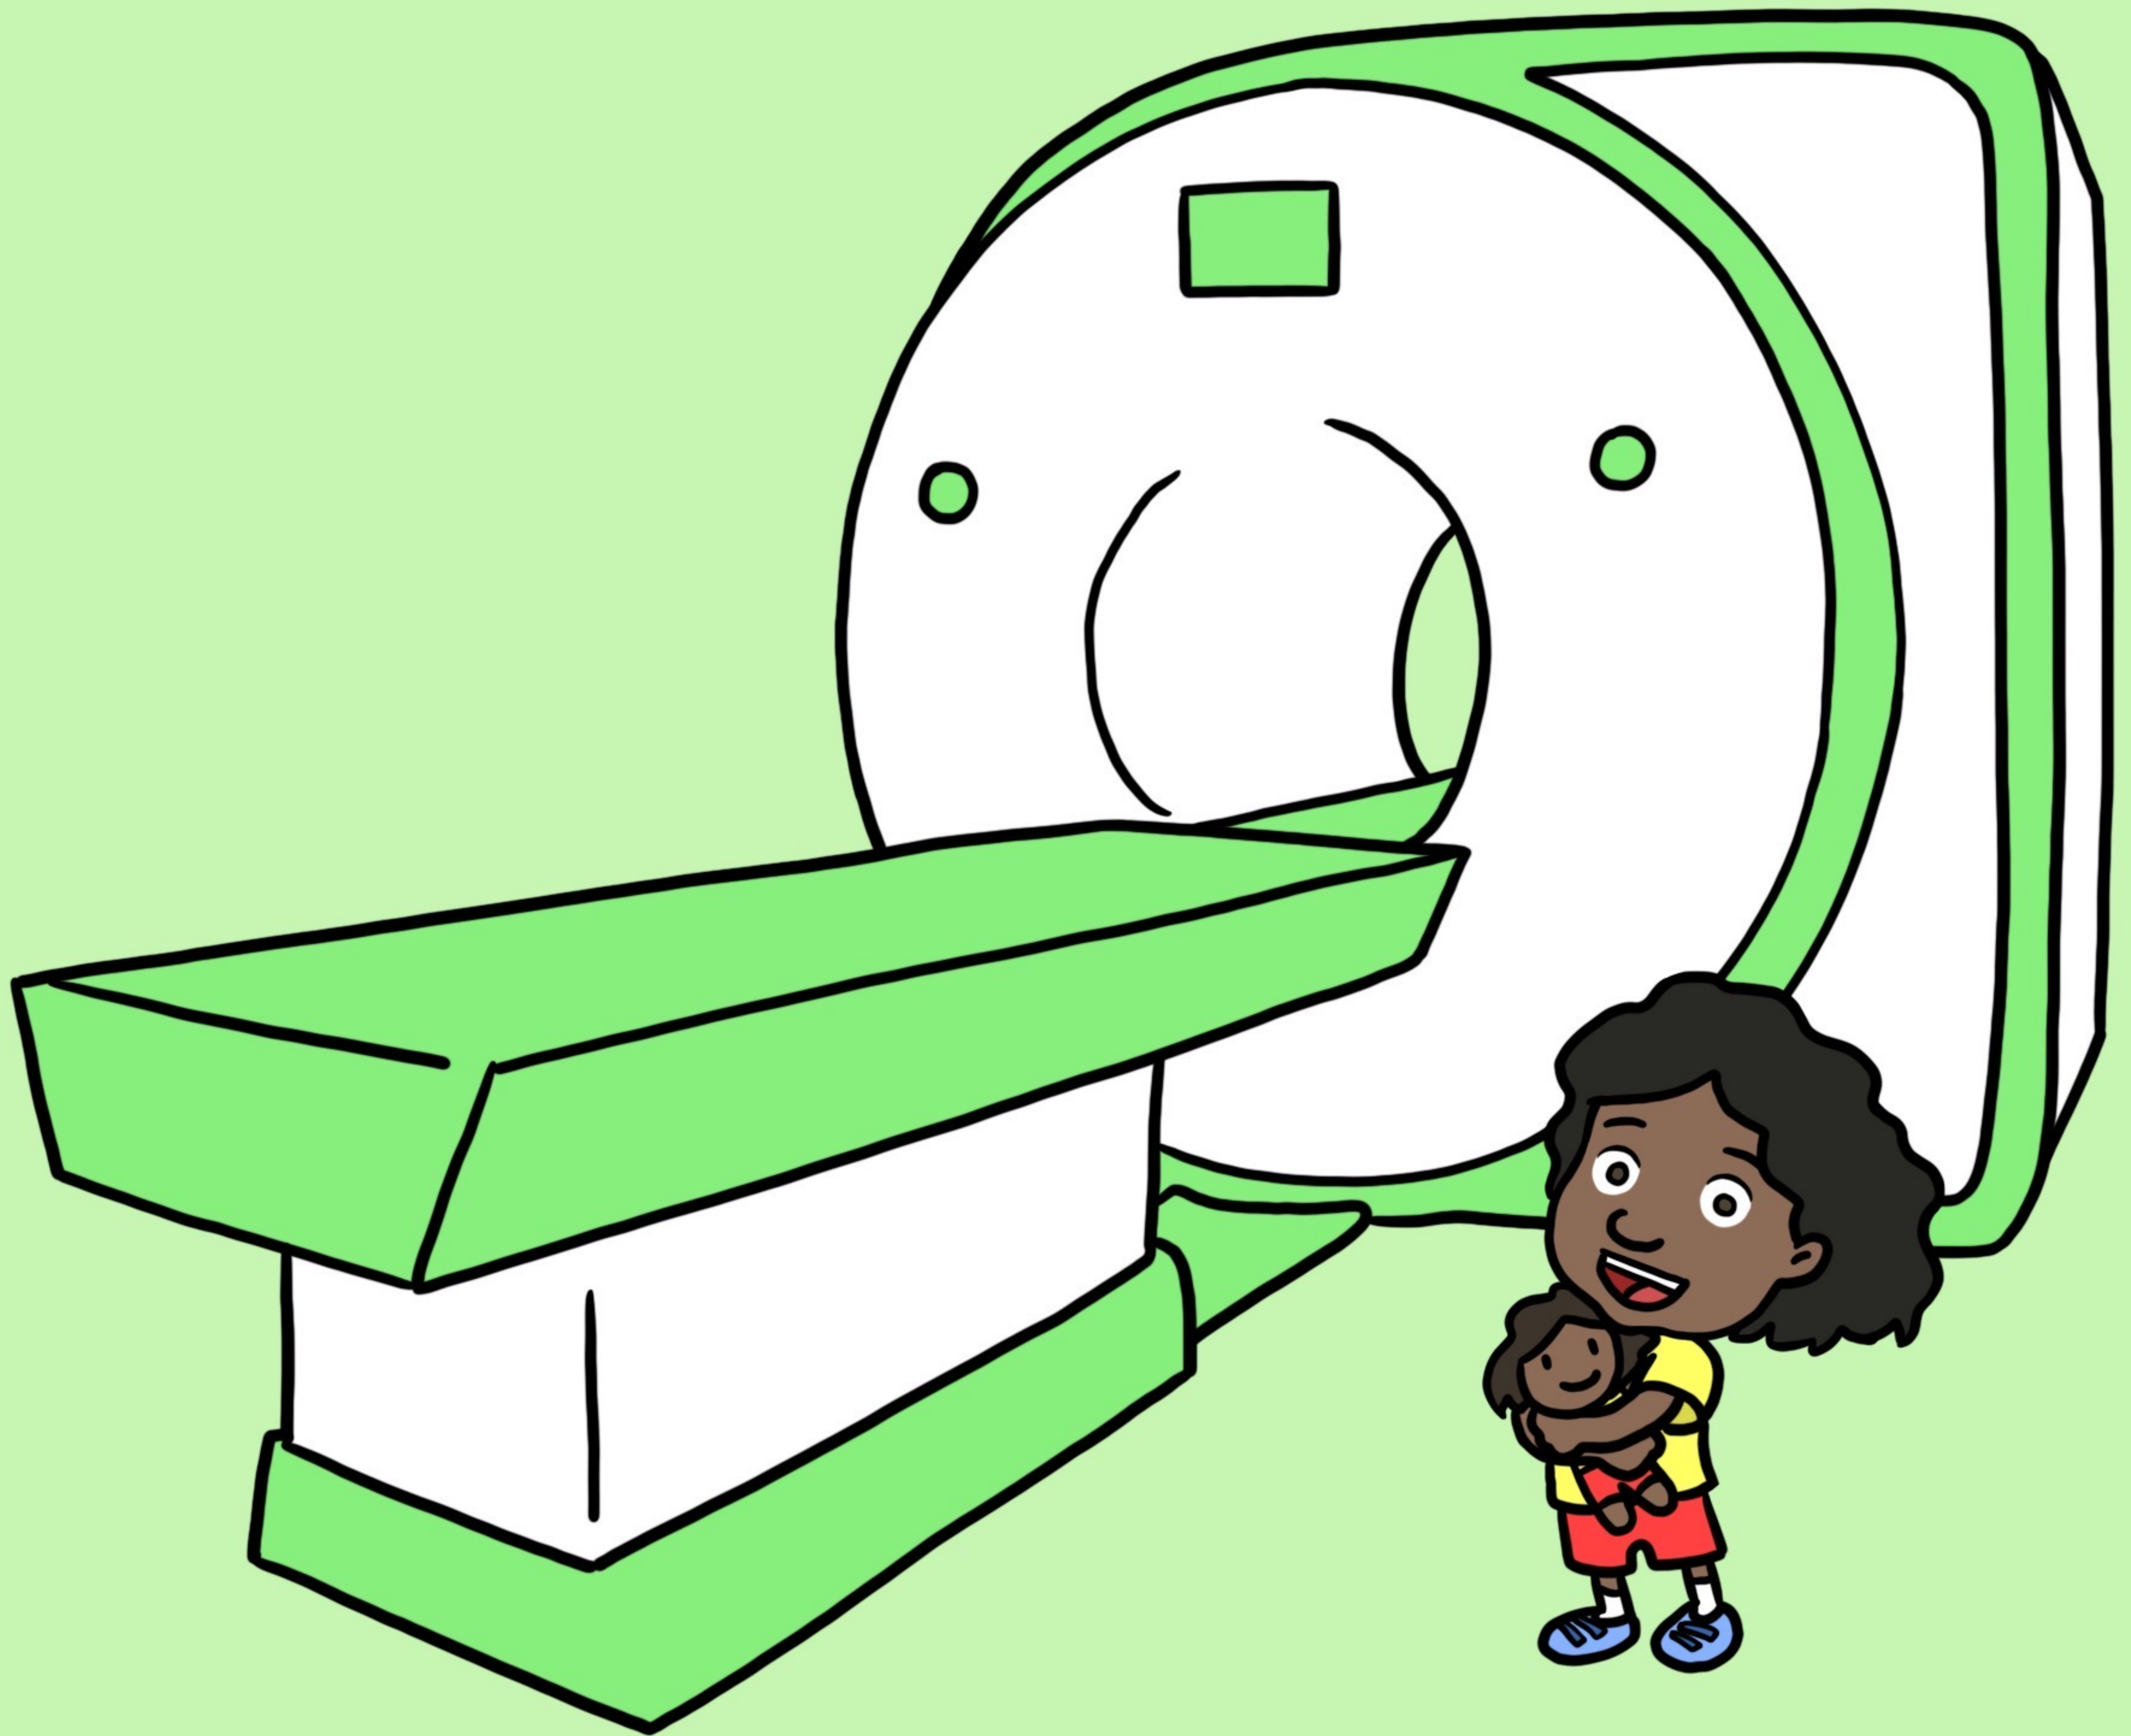

The CT scan uses
X-rays to look inside me
and make a picture.

My CT scan is very safe,
someone is always caring for me.

This scan is called an MRI.
It has a hole like a donut too!

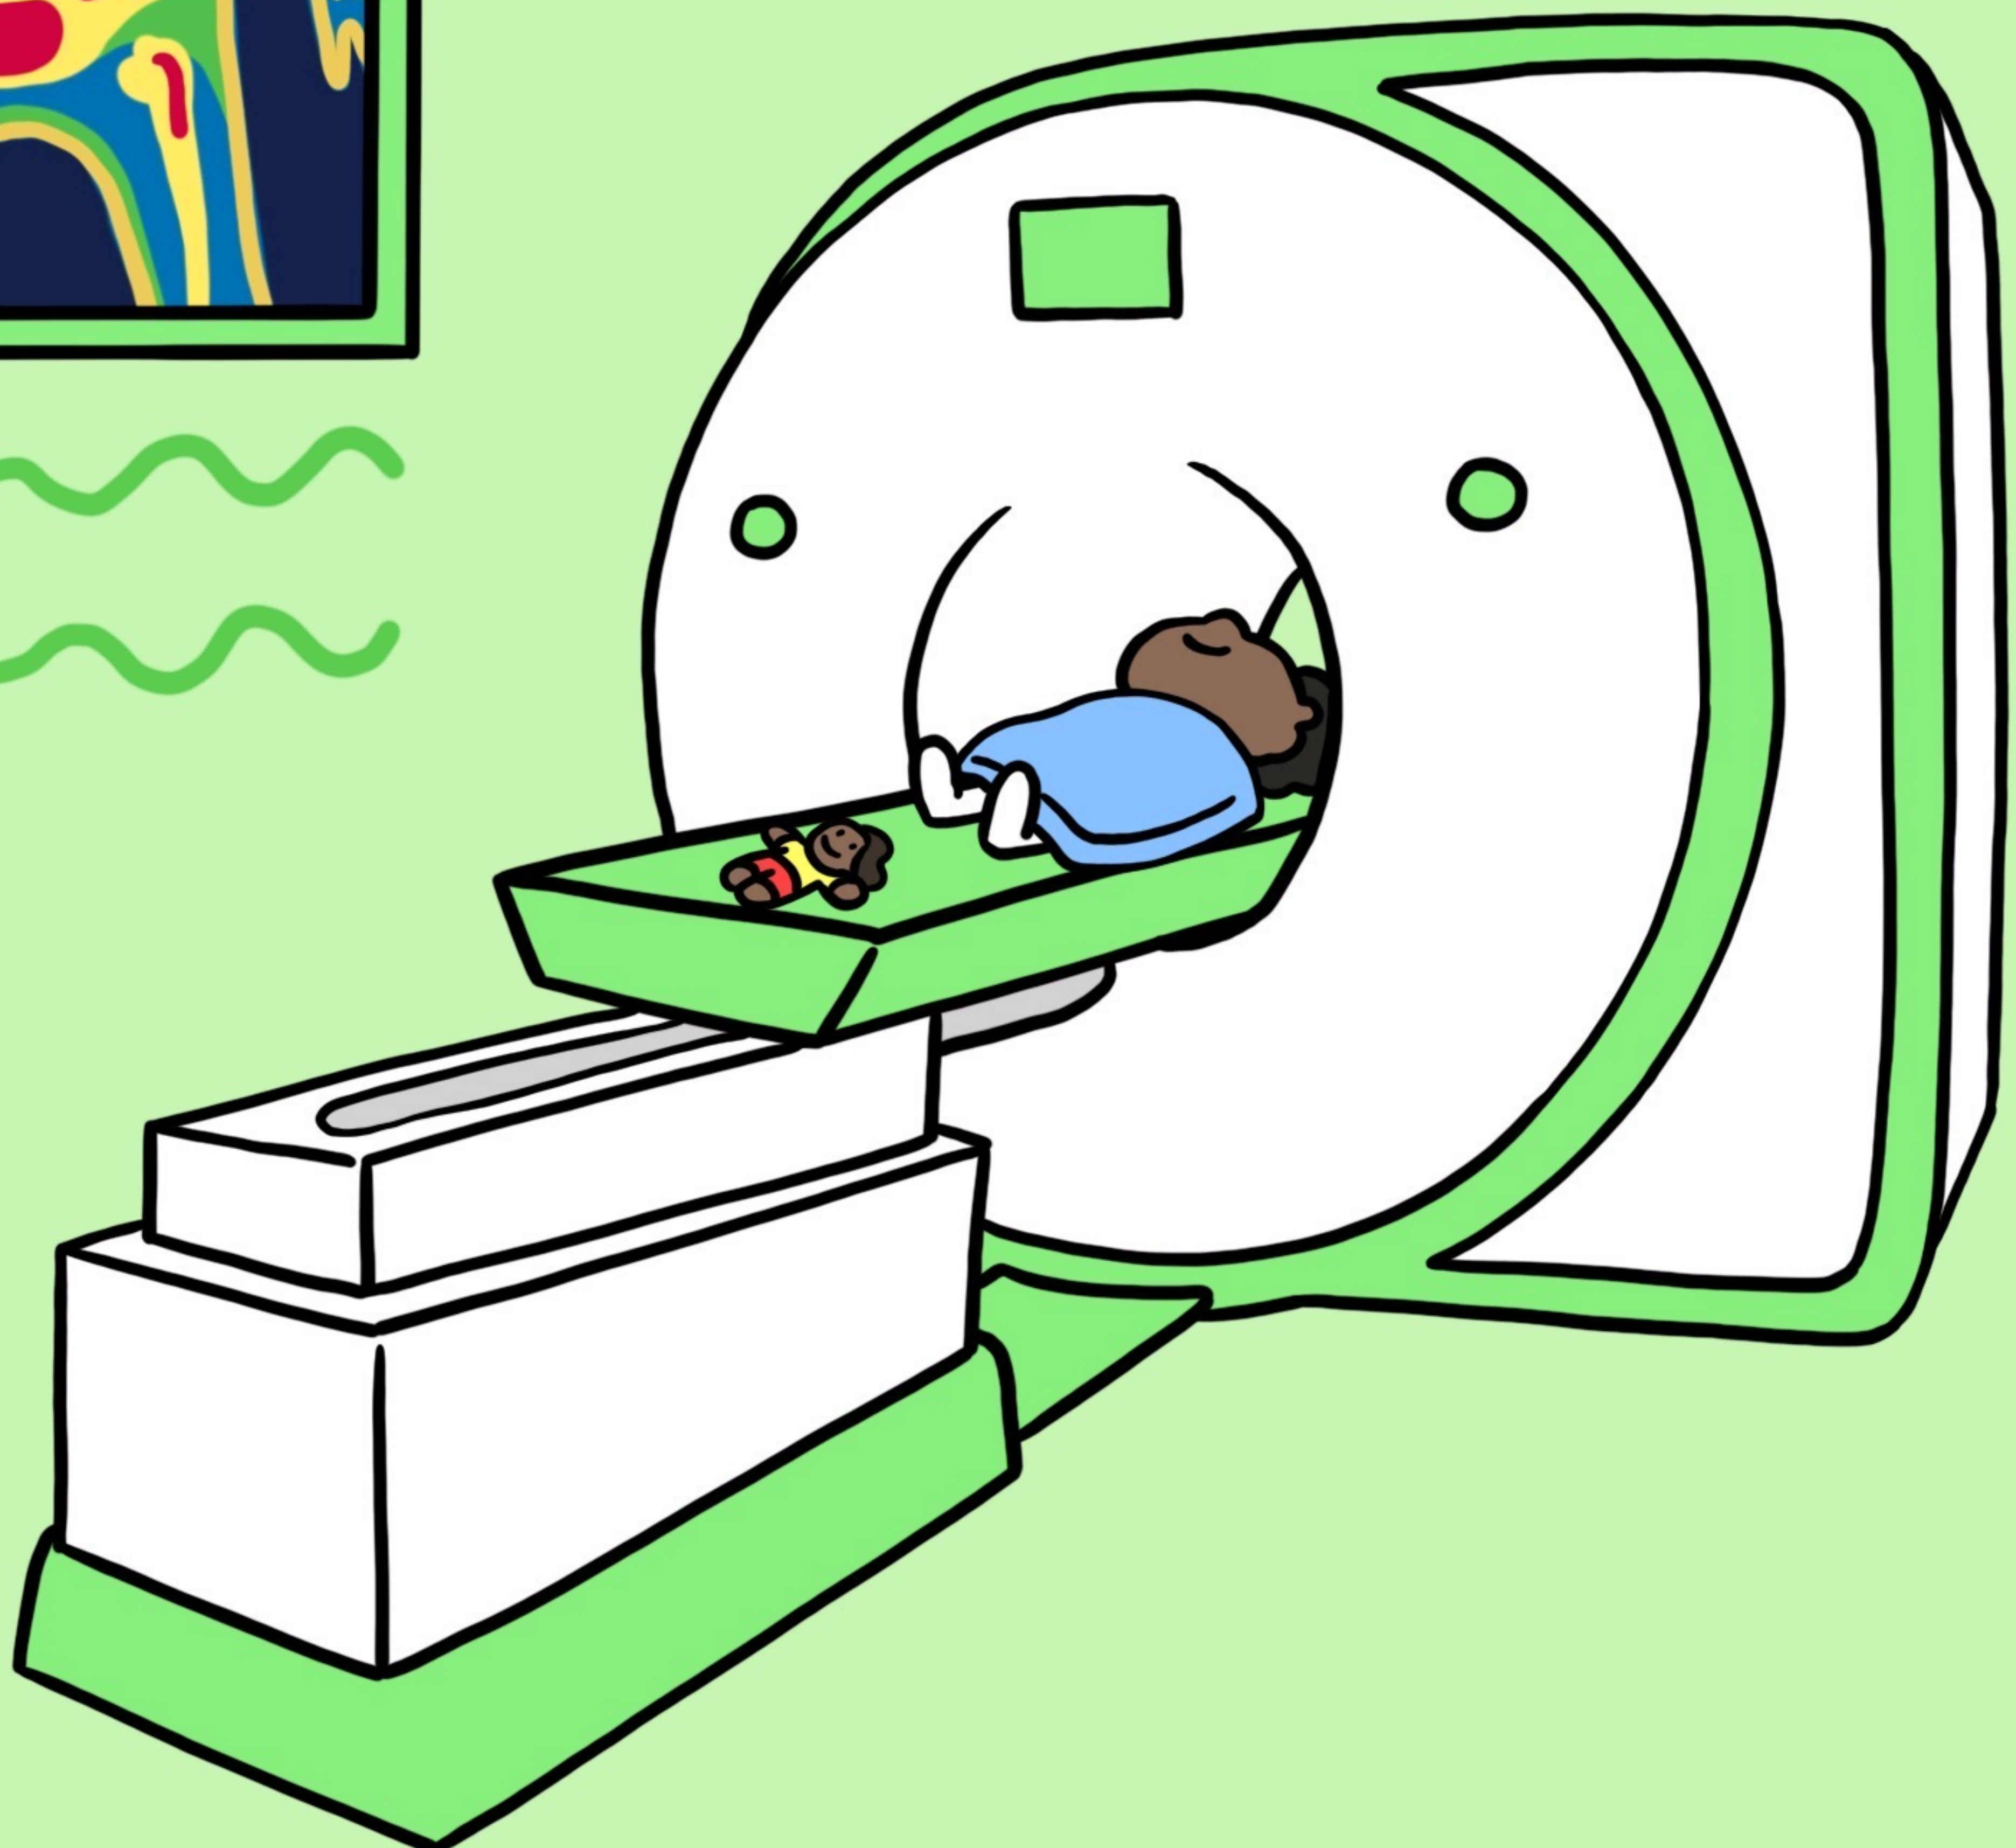

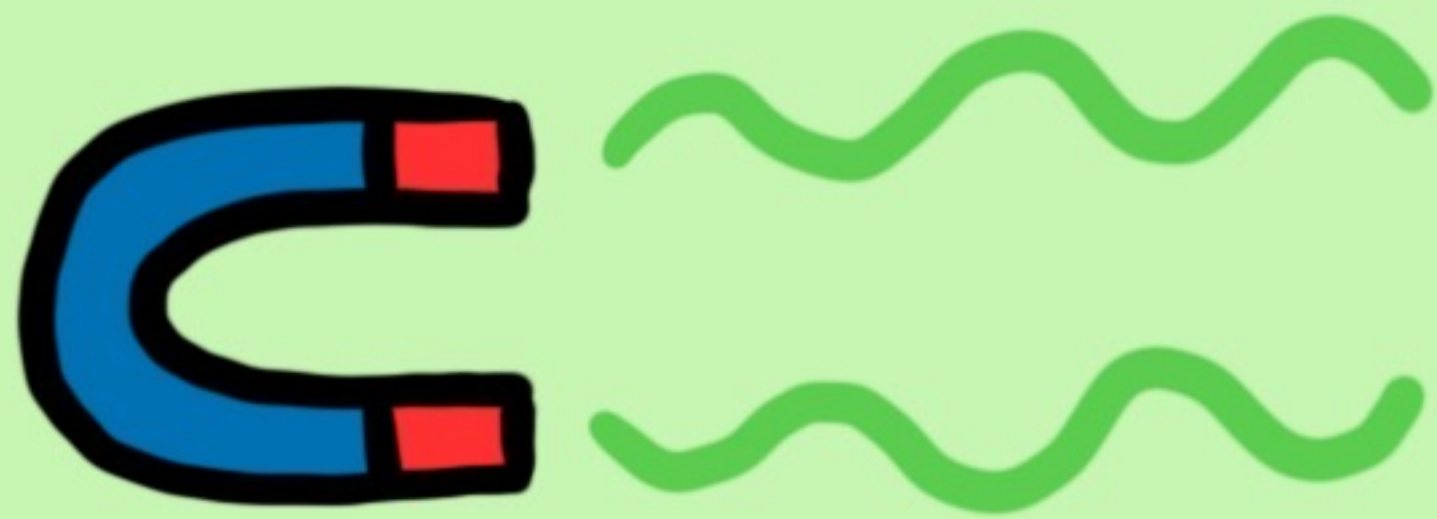

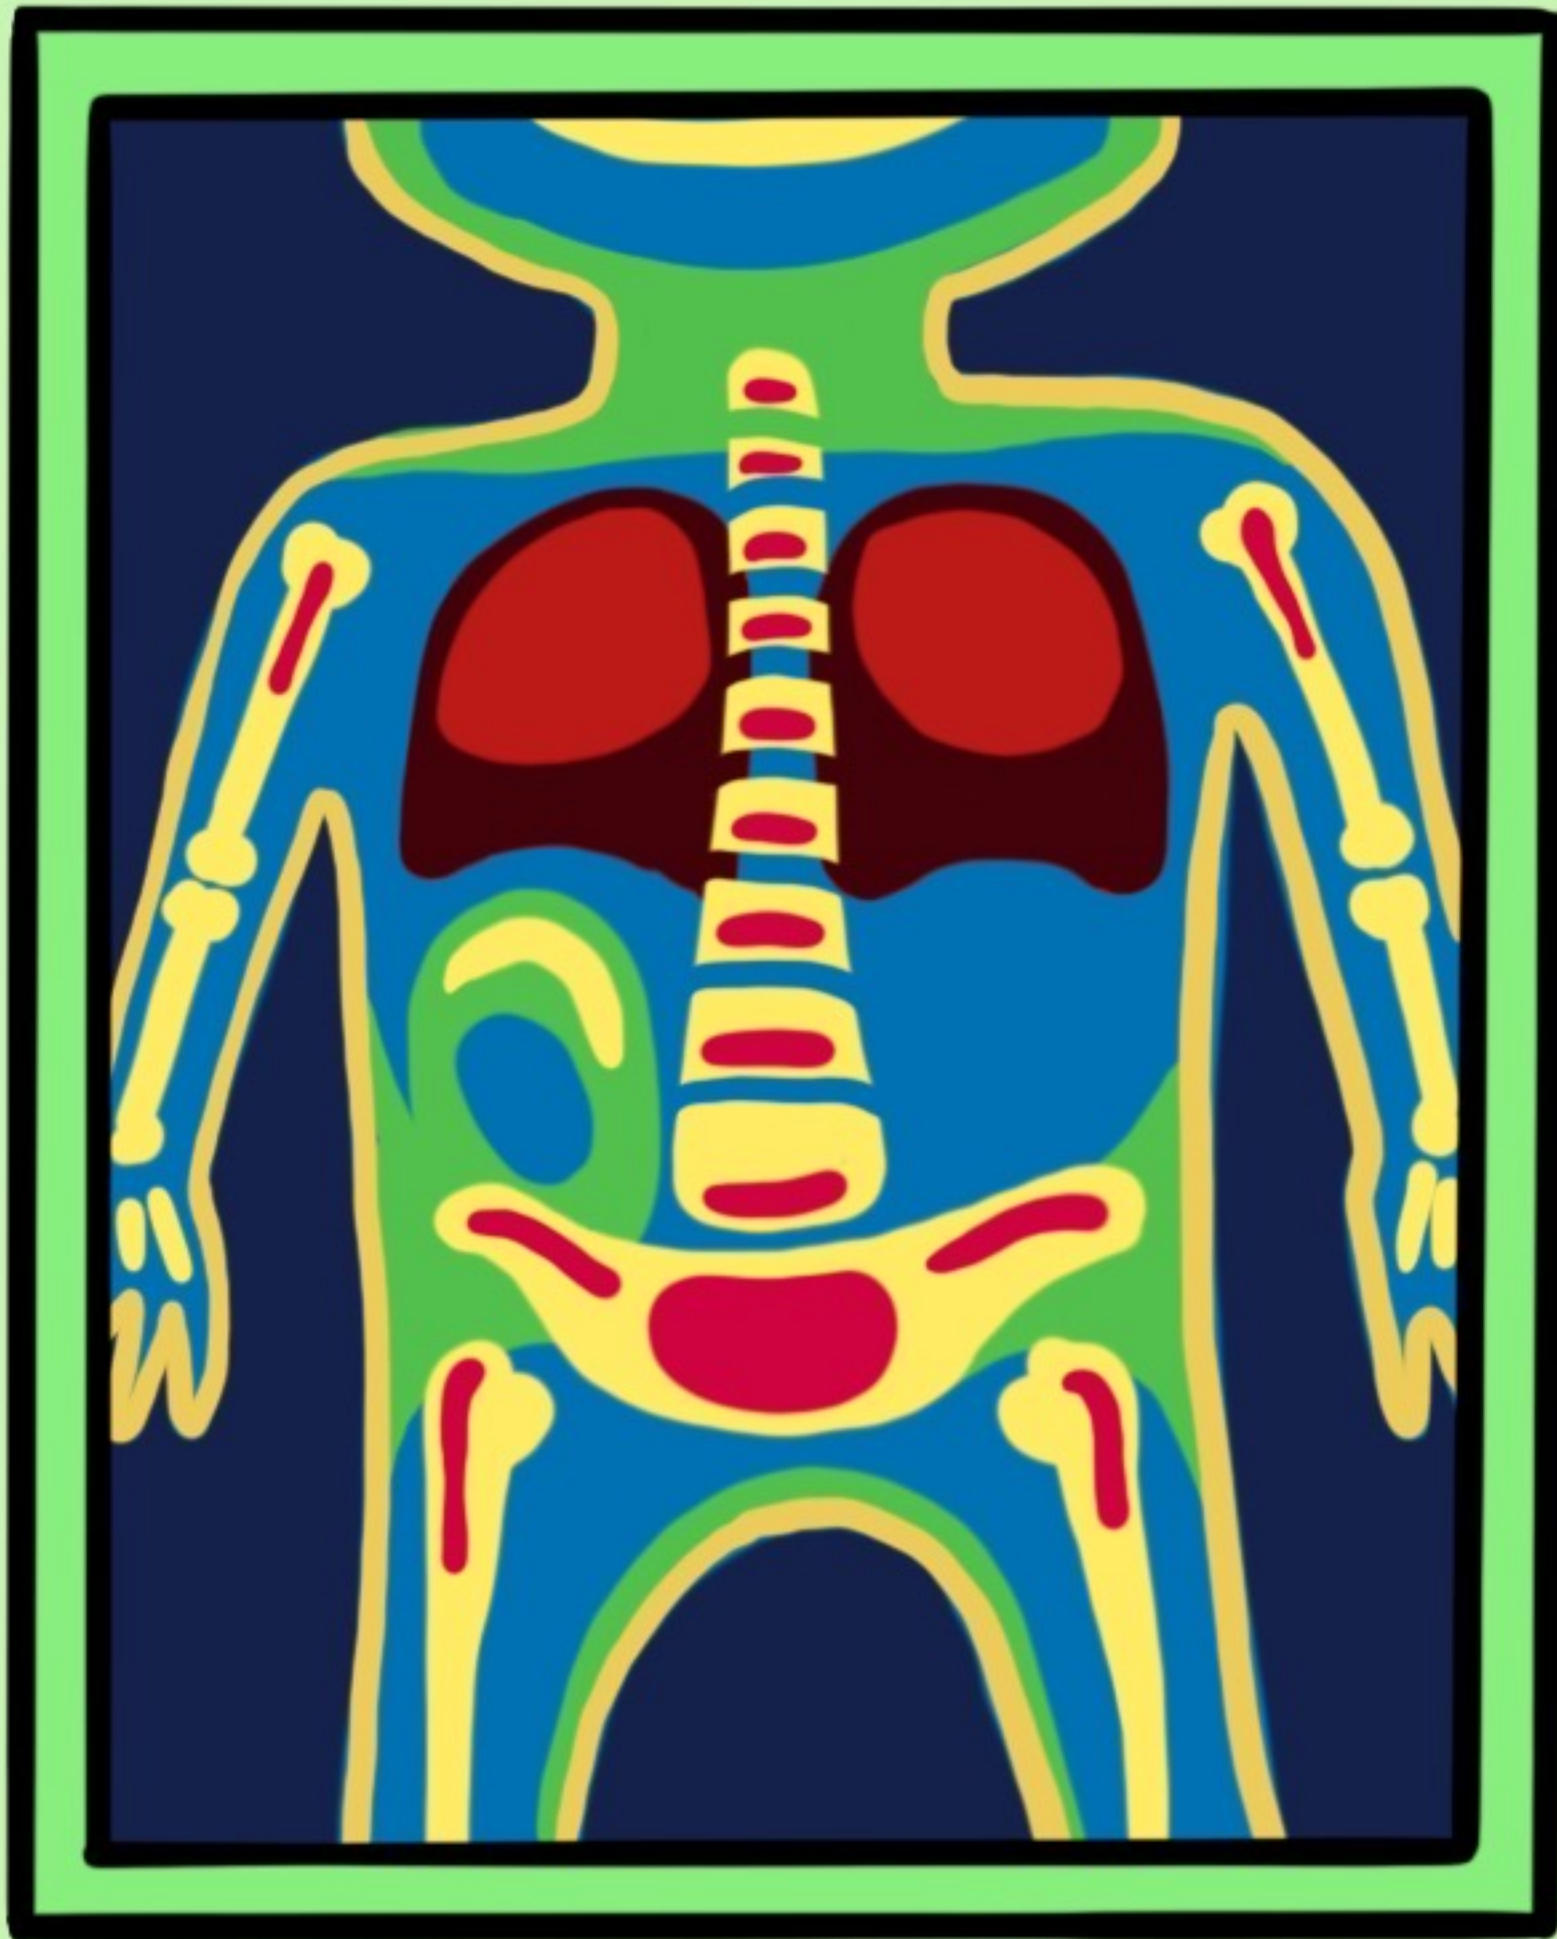

The MRI scan is very loud, it takes a long time and I need to be very still the whole time. What can help me?

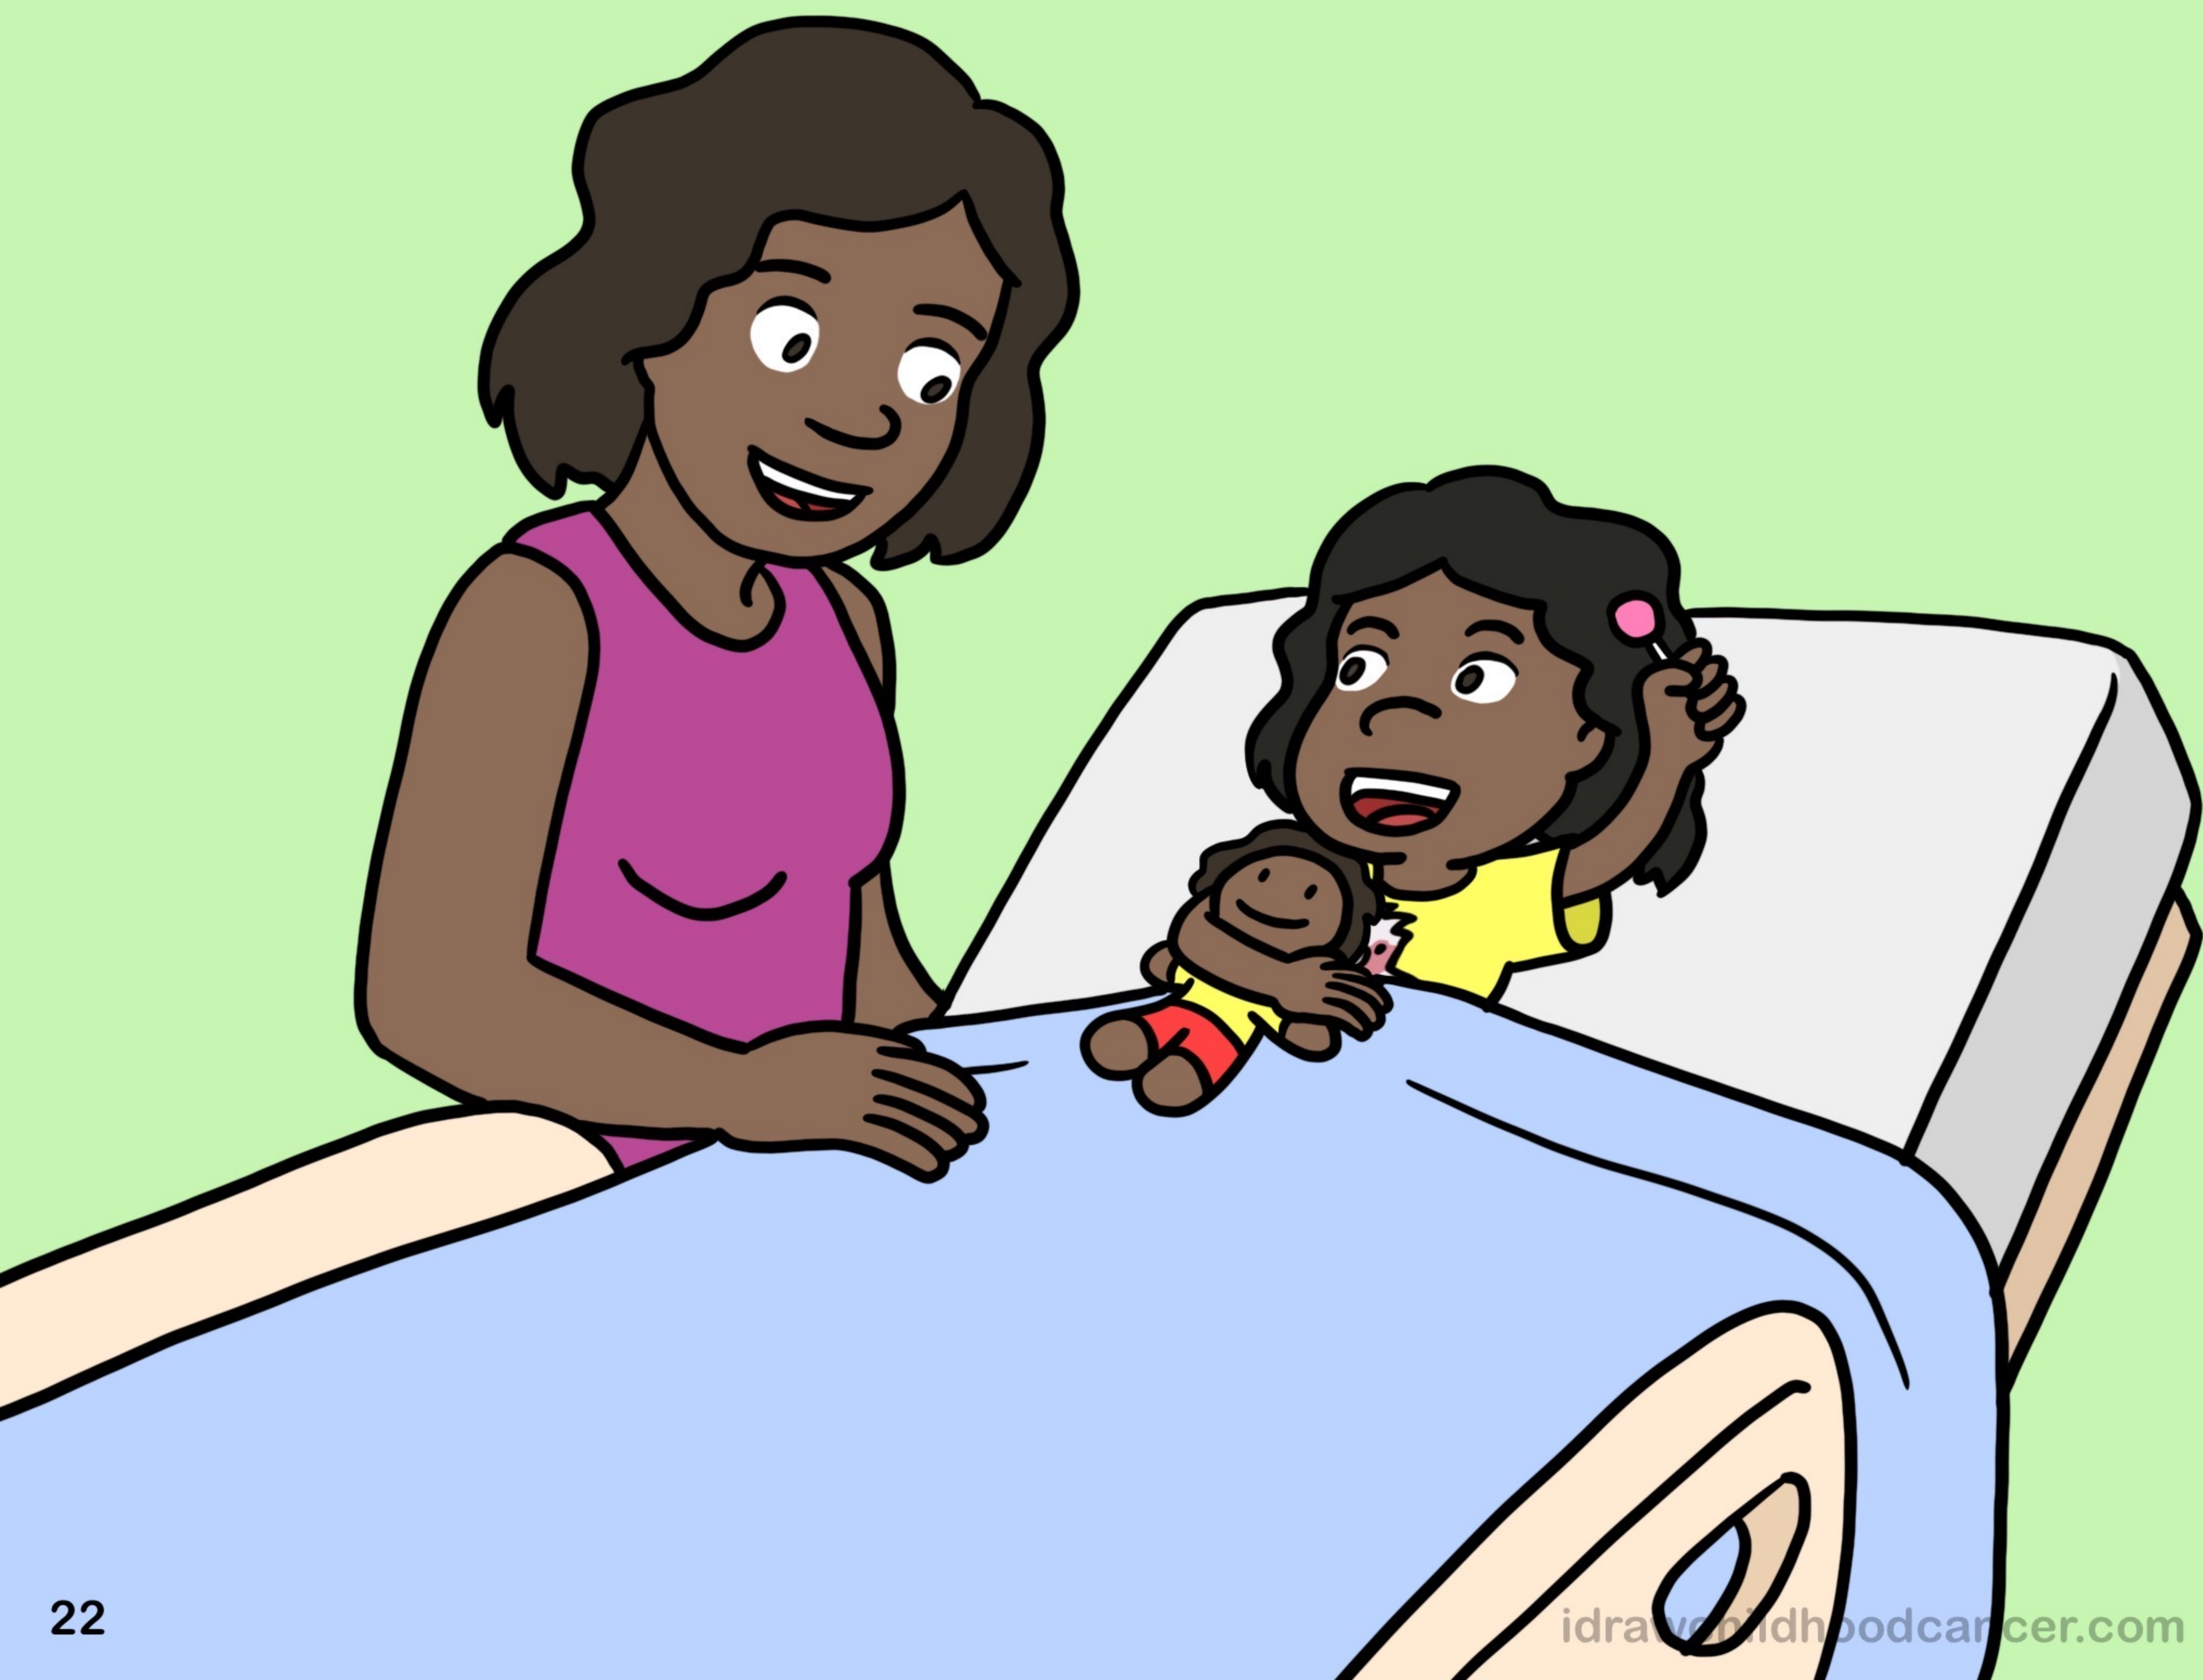

A little sleep can help me!
The doctor gives me a sleepy mask, I don't
like the smell but it does make me sleepy.

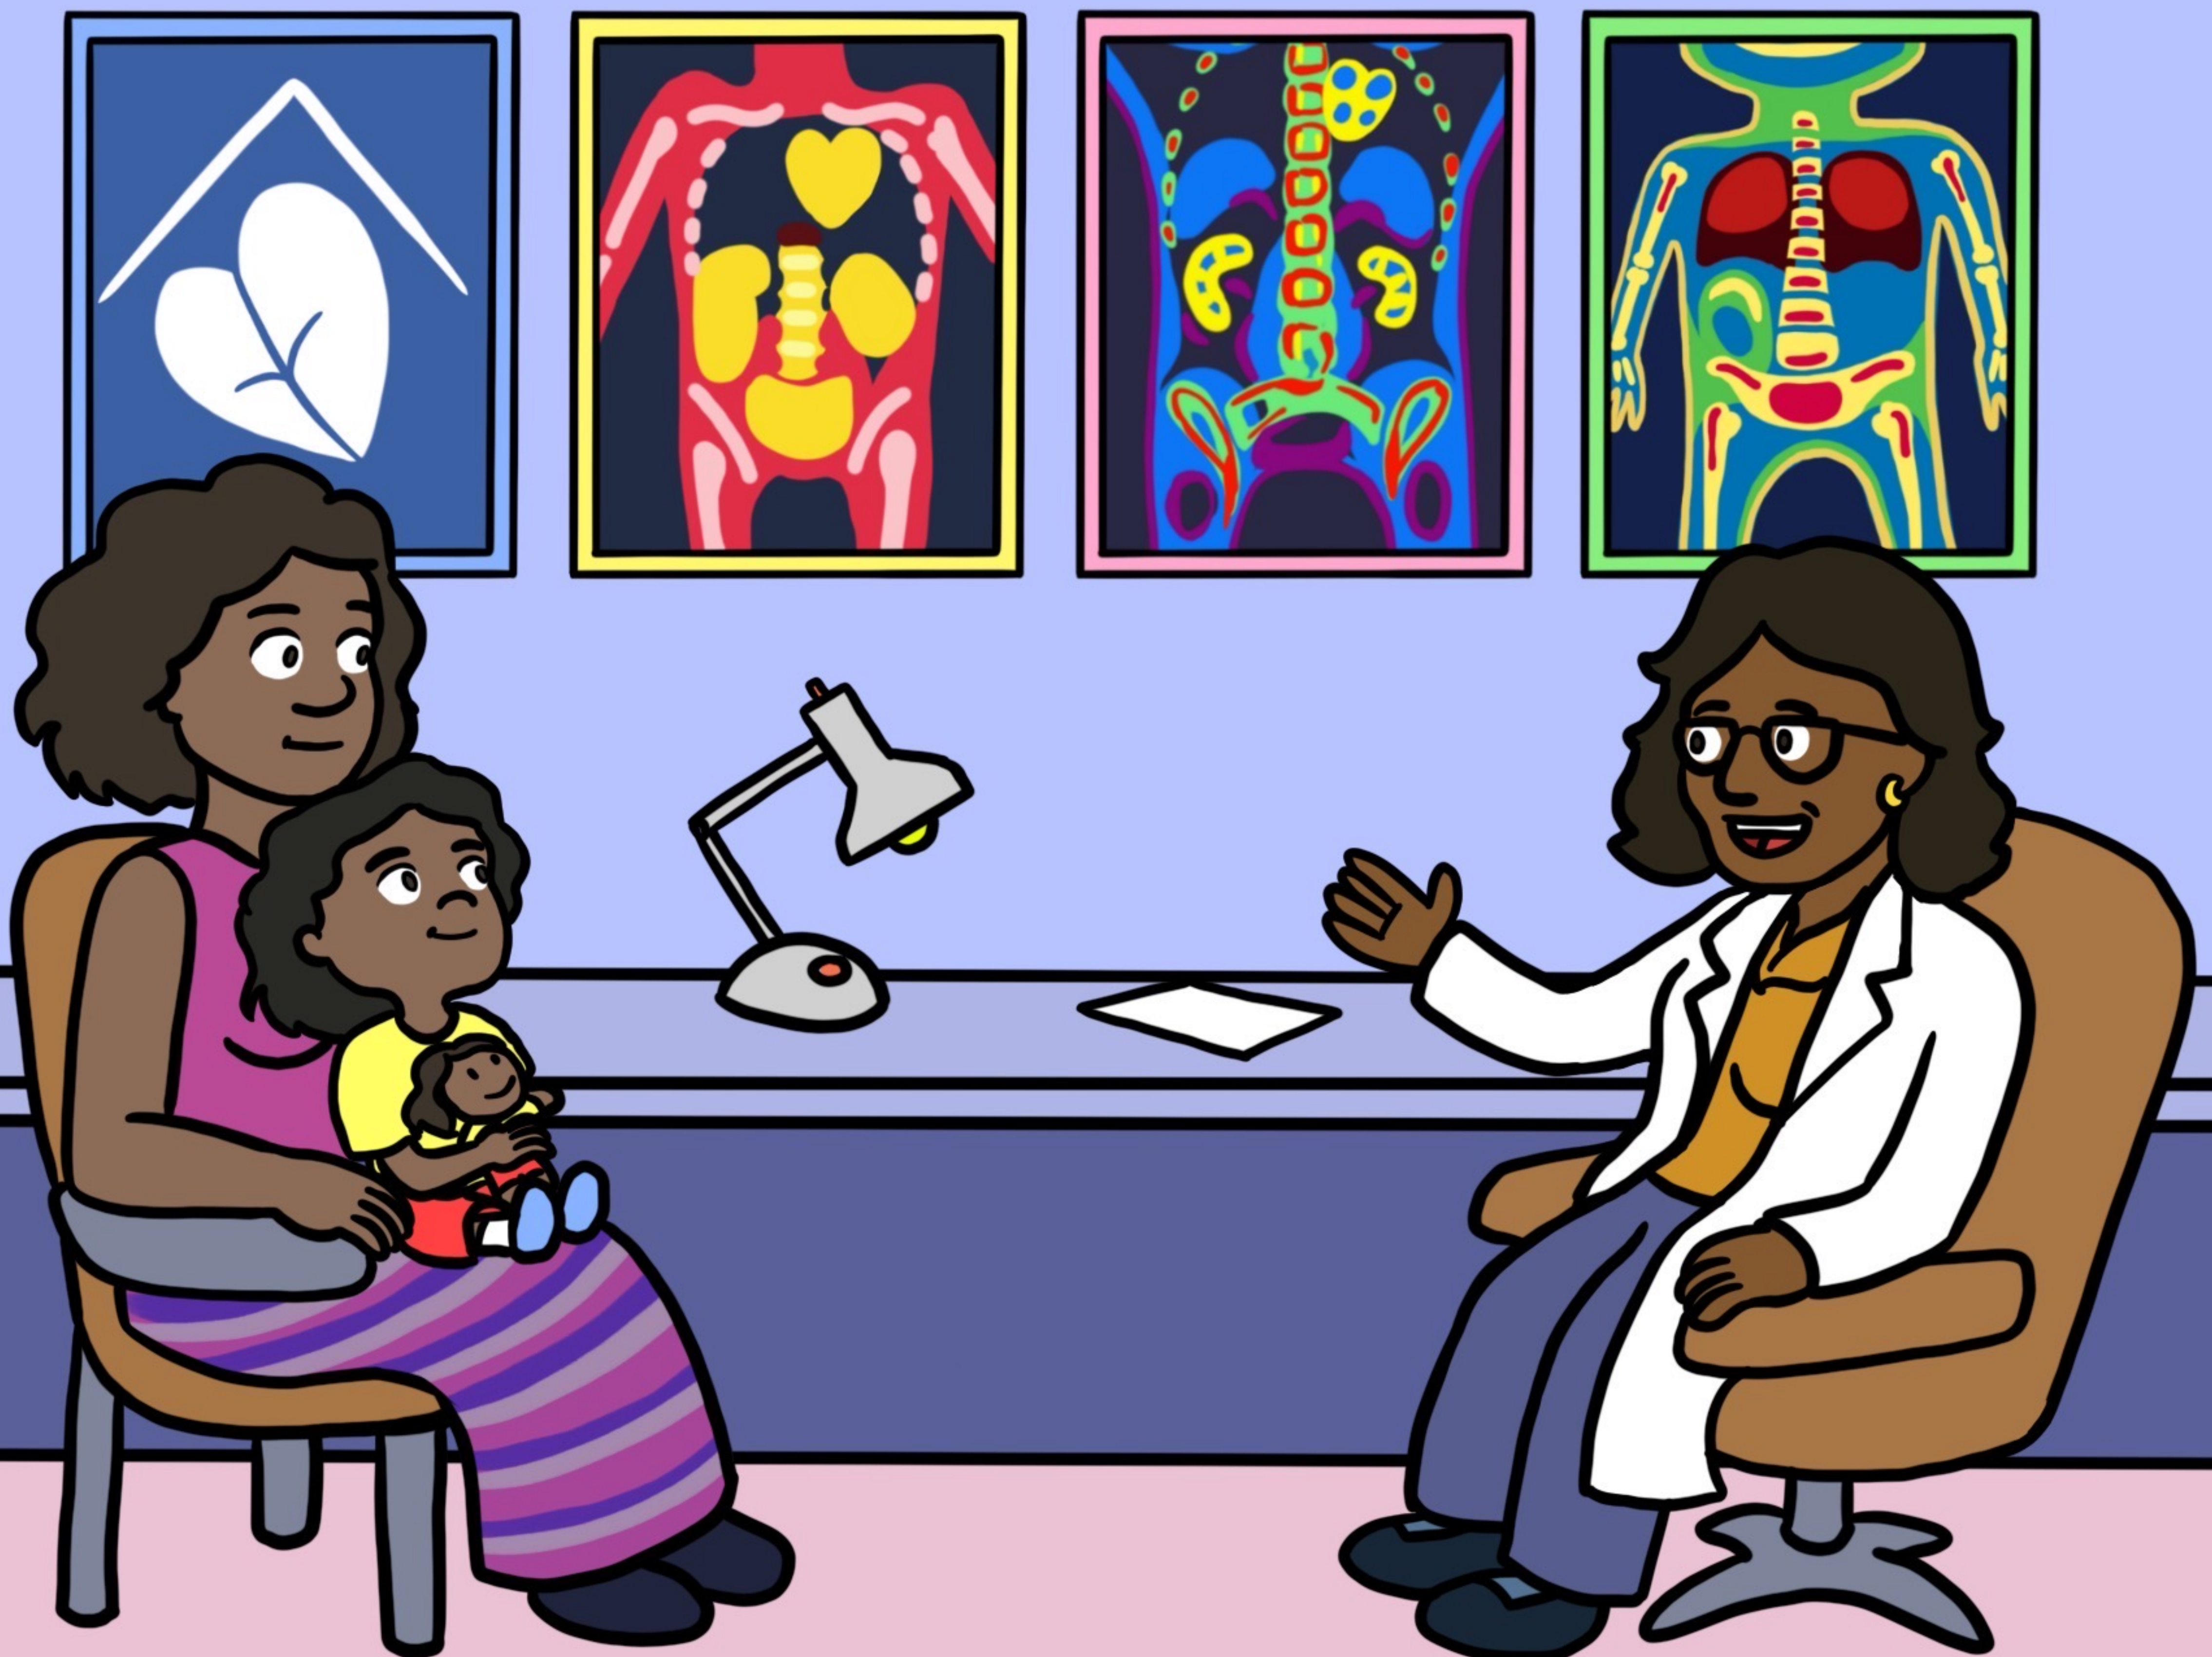

The MRI uses powerful magnets to look inside me and make a picture.

My MRI scan is very safe,
someone is always caring for me.

The doctor looks at my scans to make sure I'm ok. Now my scans are finished, do you know what time it is?

It's pizza time!
What's your favorite food
to eat after scans?
